TERROR BEHIND the C.I.A.

by Peter Meyer

“Americans can no longer claim ignorance of the horrors committed by the CIA. They can not allow this guise of “The War on Terror” to continue, especially since it roots began as a terrorist organization to spread fear.”

Americans are largely unaware of the enormity of the crimes committed by their government (or rather, by individuals within their government), but in a representative democracy, as such allegedly exists in the U.S.A. can the people deny responsibility for the actions and policies of their government? How long can they allow their government, whose leaders they elect, to commit one atrocity after another and at the same time pretend that they themselves are innocent of any wrongdoing? ...

A BRIEF HISTORY: of TELEPORTATION by Columnist Arnold Isen

Teleportation is not what you think!

While commonly seen as an advanced futuristic technology capable of moving people across great distances instantaneously, teleportation may have been happening for millions of years without any technology involved.

Of course, the existence of anything in nature, including objects moving faster than light or disappearing and reappearing instantly elsewhere, usually means science will eventually discover "how," and learn to do the same thing using machines. Yet, strange events have been described in the real world, and the word "teleportation" was coined to describe them.

The word "teleportation" was not invented for fantasy fiction. It is serious business and "quantum teleportation" is already a reality in science labs now, moving particles. But if it happens in ...

A PERFECT PLACE to DIE

"I am called here by the guardian spirit of the mountain, on which I shall destroy myself today. For I tire of loving those that cannot love themselves, and I am sick of fighting those who will not surrender their attack.

When I looked to the blue majestic peak of Fuji it beckoned me, this sacred place where elegant cedars meet the sky. I can now look toward the east and I am lonely for all that I cannot have.

I've said good-bye with a kiss to the girl that urgently prayed for my redemption and I've cursed those that sought my destruction. Yet this is not surrender to them, for the choice is mine, and mine alone. I want nothing more from mankind that only seeks power to corrupt others, and is destined only to destroy innocent human lives with their greed and for their pleasure. For this I will no longer be a victim to their evil plotting." ...

The VAN ALLEN a Report by Jari Mikkola

The Apollo missions have been controversial since the program of sending astronauts to the moon began. The argument that the entire Apollo program was a hoax may be utter nonsense!

According to Bill Kaysing, author of the 1974 book, "We Never went to the Moon," whose exact words about the program are "Any human being traveling through the van Allen belt would have been rendered either extremely ill or actually killed by the radiation within a short time thereof."

The Van Allen Belts are two distinct regions (and a third was recently discovered) several thousand kilometers above the Earth's atmosphere where the Earth's magnetic field holds trapped particles of our sun's solar wind. Without protection, any of earth's lifeforms would indeed receive lethal doses of radiation should they ...

IN THE KNOW

Extraterrestrial Disclosure: Are We Ready? Are YOU Ready?

The US space agency has spoken out for the first time about life on other planets and they are certain it DOES exist! Having made this astonishing claim during a conference in Washington, NASA now hopes to scour the universe in hope of finding these alien life-forms.

NASA Administrator Major Charles Bolden told British schoolchildren that he was confident that scientists would find life outside of Earth because there were so many planets that are similar to our own.

Asked by 10-year-old Carmen Dearing if he believed in aliens, he said: "I do believe that we will someday find other forms of life or a form of life, if not in our solar system then in some of the other solar systems - the billions of solar systems in the universe.

"Today we know that there are literally thousands, if not millions of other planets, many of which may be very similar to our own earth. So some of us, many of us believe that we're going to find...evidence that there is life elsewhere in the universe."

Major Bolden also admitted that Area 51 existed but said the US government was not hiding alien life there.

"There is an Area 51," he said. "It's not what many people think. I've been to a place called that but it's a normal research and development place. I never saw any aliens or alien spacecraft or anything when I was there.

"I think because of the secrecy of the aeronautics research that goes on there it's ripe for people to talk about aliens being there."

The existence of Area 51, has been a badly kept secret for decades and it has fueled the imaginations of conspiracy theorists and UFO hunters around the world.

Are Anonymous: Freedom Fighters or Criminals?

To understand Anonymous you only need three words: *Activists, Hackers* and *Guy Fawkes*.

Anonymous is a global network of activists and hackers with members in countries all over the world. Its members are known as "Anons" and all hide their identity by wearing Guy Fawkes masks, similar to those worn in the film "V for Vendetta."

What do they do?

Anonymous first started out on the image website 4chan. Visitors to the site show up as "Anonymous" hence the name.

4chan users raided and hacked websites including several attacks on social networking site Habbo Hotel. These led to the first media reports on the group.

A common Anonymous tactic is a "denial of service" attack. This crashes a website by sending LOTS of internet traffic its way. Death by spam, basically.

Soon the group started pranks and "operations" in the real world. Anonymous first wore Guy Fawkes masks to protect their identity whilst protesting against the Church of Scientology.

The church had tried to remove a video about Scientology by serving a legal copyright notice. Anonymous saw this as trying to censor the internet.

The motto commonly associated with Anonymous is: "We are Anonymous. We are Legion. We do not forgive. We do not forget. Expect us." ...

Imagine Describing Our Universe to an Alien from an Alternate Dimension. Where Would You Begin?

You might reasonably begin by explaining that we live in three dimensions of space and one dimension of time. Space and time are so fundamental to our understanding of the universe that they are woven into nearly every equation in physics. They are the words in which we speak the language of nature—so tried, tested, and true that we don't even know how to talk about the cosmos without engaging space and time in the conversation.

But what if it turns out that space and time are not the fundamental infrastructure of our cosmos—what if they are themselves products of some deeper physics?

This idea is called emergence. We see it in nature, as when fish school or birds flock. If you were only to study an individual fish or bird, you would never predict how they would come together as a group. Yet each one “knows” simple rules that, when combined, create a wide range of agile and elegant behaviors. Could it be that physicists have been studying flocks all along, not realizing that it's the birds that are truly fundamental?

“There aren't many things in quantum gravity that everyone agrees on,” says Eleanor Knox, a philosopher at King's College London who specializes in the philosophy of physics. “Yet the one thing many people seemed to agree on in quantum gravity was that we were going to have to cope with space and time not being fundamental.”

It sounds radical, but physics has a long and proud history of spearheading exactly this kind of coup. “Historically, whenever we thought something was fundamental, it turns out that it is not,” says Nathan Seiberg, a theoretical physicist at the Institute for ...

Apocalypse Programming: Knowing the End of Days

Don't Fall for Any of It

Fearless freedom is our natural state.

The many end of the world scenarios we've had pumped into us from birth, from ducking under our primary school desks in atom bomb drills to apocalyptic religion, books and movies, all have a targeted effect. It's not just about sensationalism and sales with all the media's putting into this. They're playing with very deep human dynamics.

Do they really know something we don't? Or is this just more fear programming to gain a tighter grip on humanity.

Or is it both? Or is there perhaps something much, much deeper underlying these psychotic charades?

The most profound truth beyond all of this illusion is that there essentially is no end, not in the deeper sense where it really matters. Cycles and spirals of change are absolutely “normal” and to be expected and accepted in this 3D reality, while even the underlying more real worlds are also in constant flux, yet they are endless.

Fear of an ending is a lie of the matrix, much like death.

Don't fall for any of it. Fearless freedom is our natural state.

Inside Manipulators and the Fear Machine

We can pretty much assume insider media moguls and movie producers have a lot of information at their fingertips we're apparently not privy to. How they get this info is almost fun to visualize, almost like an old *Spy vs Spy* cartoon. Only these control creeps are ugly and dark. ...

LUXURY TRENDS

FROM OUR DIRECTOR

JARI MIKKOLA | MANAGING DIRECTOR | THE JOURNAL

It's great to be back!

For those of you familiar with our Journal, you will notice we have undergone a major redesign.

The Internet is a wonderful tool for distribution, and by utilizing some of the strengths of Internet Publications, we have created a wonderful, and beautiful reading experience for our followers that is completely interactive. Since we have a wide demographic age distribution, it is also easy to read for our some of our ageing readership (with zoom capabilities on each page) and awesome graphics and articles to attract a younger audience.

I hope that the new design will improve not only our brand perception by creating simpler, less intimidating presentation of our content, and create a brand that is easily recognized.

One pillar of the redesign was to utilize fonts that were clean, readable, and stylish while at the same easy to read when printed. To accomplish these goals, our director worked with Google in addressing and developing three specific typefaces. One designed to present bold

easy to read headers (Niamey a sans serif), and two utilitarian text faces (New Times Roman, and Georgia. both serif fonts) for easier online reading.

Historically, both relate to the typeface Courier, with clean, round ball terminals, open counters, and a large x-height. New Times Roman is more of a traditional display font, designed to be lovely as an italic font or all capital letters as a title. We achieved a cleaner look to the Journal by using several beautiful typographical typefaces from editorial content to the detailed articles that adds a touch of elegance to the content within these pages that are easy to read.

If you've read the Journal of Anomalous Sciences before, you will immediately recognize the inspiration behind the way that our page layouts have changed several sections the Journal of Anomalous Science.

We know the demands on your time are growing ever more pressing and the reason we've created several formats for you to enjoy. You can now download the entire Journal as an executable "flippy page" magazine for you to review on your laptop or PC, a downloadable copy of the Journal as a PDF to print, or to read online; where you can also view an article's video content.

Either way, we hope you enjoy our latest edition of the JAS magazine and we would love to know what you think so please drop us a line and let us know!

Kind Regards,

A handwritten signature in black ink that reads "Jari Mikkola" with a stylized flourish at the end.

JARI MIKKOLA

An Awakening: the Emergence of Indigo Consciousness

Mikkola's explanation of an evolutionary phenomenon that is taking place all over the world is riveting. In his arduous search for answers regarding early childhood experiences, Jari discovered startling evidence to an emergence of a consciousness that goes far beyond what we have come to know as an Indigo.

His extensive research not only describes the science behind consciousness, it provides a fascinating and detailed overview of what it means to be an Indigo Child.

Jari eloquently explains the difficulties growing up Indigo and how it can affect everyone around them. His detailed analysis is well documented and a pleasure to read, however, it's not a book that can be read from cover-to-cover in one sitting, for the simple fact that there is a LOT of information to absorb.

The book is full of first-person experiences, fascinating information, and riveting explanations regarding the unprecedented increase of human intelligence, as well as the dramatic rise of those being labeled as 'mentally challenged.'

THE JOURNAL STAFF

JARI MIKKOLA | MANAGING DIRECTOR

Jari has been researching the anomalous sciences for over 35 years all over the world. Throughout his career, Jari has explored many different phenomenon around the world from alien abduction to UFOs, and was encouraged to found World Nexus Publications, The Journal of Anomalous Science, The Dimension Zone, Occam's Enigma Desert Highlands Paranormal, and the DZ Nucleus. As a published author of many articles over the years to various publications, it was a natural transition for him to create The Journal of Anomalous Science in 2008 as a news letter and later as an on-line publication. Check out Jari's new book on Amazon "An Awakening: the Emergence of Indigo Consciousness."

DIANA CAPRIO | MANAGING EDITOR

Diana has been involved with the paranormal since the early age of seven when her grandmother piqued her interest talking about the paranormal. Over the years Diana has read many books and began researching purportedly local hauntings in her area, some of which were used and published in articles on the paranormal. Her experience and passion is a valuable asset for the team in the preparation of every issue because of her attention to detail. A win-win situation for us all.

RHETTA AKAMATSU | ASSOCIATE EDITOR

Rhetta has been with The Journal since its inception and instrumental in shaping and guiding its direction. As an accomplished author of several books, including her most popular, "Haunted Marietta." she has been well respected in the paranormal world while still managing several web sites and family. Her web influence helped shape Ghost to Coast, a handbook of ghost tours, paranormal investigation groups, and haunted hotels across the country, Visit her at her website at <http://rhettasbooks.com>.

ZACH ROYER | ASSOCIATE EDITOR

Zach is an author, part-time journalist, full time independent researcher and lifelong explorer of the supernatural. An article based on his book, "Pyramid Rising." was featured in the Journal of Anomalous Sciences in 2012, and has just joined our team. Zach currently leading the Kahuna Research Group, an anomalous research organization on the Big Island of Hawaii, dedicated to exploring the history and mystery of Hawaii. Having led numerous investigations of purportedly haunted locations across multiple states, that included a popular resort, a national park, and an ancient battleground, made him a natural fit on the Journal.

THE JOURNAL

Michael Cremo is a member of the History of Science Society, the World Archaeological Congress, the Philosophy of Science Association, the European Association of Archaeologists and associate member of the Bhaktivedanta Institute specializing in history and philosophy of science.

Stephanie Thorburn is freelance writer focused on both music and the nascent areas of social scientific study, including Parapsychology, Sociology and Socio-astronomy. She holds an MA in Sociology Qualitative Research from Goldsmiths College, London UK and a BSc. (w/Hons) in Sociology/Psychology from City University. She has a range of vocational professional development qualifications, including Parapsychology (w/distinction).

Stanton T. Friedman Ph.D is a Nuclear Physicist-Lecturer and grew up in Linden, NJ, spent 2 years at Rutgers University, and then received his BSc. and MSc. Degrees in physics from the University of Chicago in 1955 and 1956.

Loyd Auerbach is a professor of parapsychology and a prominent field investigator in psychic phenomena. He is an accomplished professional mentalist and psychic entertainer, performing as Professor Paranormal before private and corporate groups. He served as President of the Psychic Entertainers Association for four terms from 2001-2005.

Nick Pope used to run the British Government's UFO project at the Ministry of Defence. Initially sceptical, his research and investigation into the UFO phenomenon and access to formerly classified government files on the subject soon convinced him that the phenomenon raised important defence and national security issues, especially when the witnesses were military pilots or where UFOs were tracked on radar.

IAL ADVISORS

Stephen Wagner has been an investigator of many aspects of paranormal phenomena for over 30 years and hosts a forum on <http://paranormal.about.com>.

He has written articles for numerous magazines, including FATE, and is the author of "Touched By a Miracle: True Stories of Ordinary People and Extraordinary Experiences." He is also a member of Central New York Ghost Hunters.

Dennis Balthasser retired from the Texas Department of Transportation in 1996 as civil Engineer. Having been keenly interested in the Roswell Incident of 1947, Dennis decided to move to Roswell, New Mexico, to pursue his avocation: Ufology, working with such well known researchers as Stanton Friedman, Donald R. Schmitt, Wendy Connors, and others in their quests to find the truth.

Nigel Watson is the author of The Alien Deception, Portraits of Alien Encounters, Supernatural Spielberg and editor/writer of The Scareship Mystery (2000). Nigel's numerous publications, including Paranormal Magazine, Fortean Times, Beyond, Wired, History Today, Flip side, Strange Magazine, Magonia, The Unexplained, Flying Saucer Review, Alien Worlds, and UFO Magazine. His media website Talking Pictures is at: www.talkingpix.co.uk.

Neil Freer is a researcher, writer, lecturer, philosopher and poet living in Santa Fe, NM, and holds a BA in English and had done graduate work in Philosophy and Psychology. Author of "Breaking the Godspell," a book which explores the ramifications of the archaeological, astronomical and genetic proof for our being a genetically engineered species and presents the ramifications of this new paradigm of human nature that resolves the Creationist-Evolutionary conflict.

Micah A. Hanks is a full-time journalist and works with the L.E.M.U.R. Paranormal Investigation & Energy Research team in Asheville, NC. He has been featured on a variety of television and radio programs, including the History Channel's Guts and Bolts, Travel Channel's Weird Travels, and CNN Radio. His website, The Gralien Report, is frequently updated with his latest research on UFOs and the unexplained. Visit his site at <http://www.gralienreport.com>.

ROYAL CANIN

Joshua P. Warren is a world-renowned paranormal investigator who currently appears on the Discovery Channel series “X-Ops” and hosts a regional radio show on Clear Channel, “Speaking of Strange.” He has also been regularly featured on TLC, the Travel Channel, and the History Channel. As president of his research team, L.E.M.U.R., Warren uses scientific methods to document unexplainable activity.

Robert Cracknell has had a career where he’s worked with many UK police agencies, both as a private investigator and an independent detective, helping solve numerous cases. Every type of case from simple missing persons, fraud, kidnapping and even murder, and always adhered to his own personal philosophy of the simple

Patty Greer is an accomplished film maker, recognized for her insight and artistry by receiving the prestigious 2009 EBE Best Feature Award at the International UFO Congress Convention for “2012 - *We’re Already In It.*” Her film-making career began in a crop circle in England where she passed out and felt that she need to document her experiences. Her work with the crop circle phenomena highlights many theories of extra-terrestrial life and other intriguing questions.

Tray Caladan was born in Pittsburgh, PA in 1951. He has been inspired to dedicate his life to solving life’s great mysteries. As a theorist, philosopher, and researcher of natural and alien phenomena he has dedicated his life to solving ancient mysteries like Atlantis and the World Grid, and currently lives in Northridge, CA...with his cat, Monk.

Colin Andrews is best known for his research into the crop circle & UFO subjects since 1983. His long view of both the genuine phenomenon and the human-made phenomenon provides unique insight into the subject. Colin’s twenty-five year investigation continues with growing urgency for openness and honesty in government and private research, respect for divergent opinions and co-operation between investigators in all areas.

Stan Romanek The Stan Romanek case is amazingly the world's best documented extraterrestrial experience. The multitude of unexplainable events involving Stan Romanek and hundreds of individual interpretations or public opinion surrounding his case, there is a lot for humanity to learn regard very important ETI matters that has created a stir in the scientific and UFO communities around the world. <http://www.stanromanek.com/>

In My Opinion

Political Priorities

Dennis G. Balthaser

“I really do not enjoy writing or talking about political concerns I have, but am becoming more concerned that the only objective our leaders in Washington have are interests that benefit themselves. I won't lay blame on any individual party either, as I feel they all fall into the same trap once they get to Washington.”

Over the past 65 years, there have been many documents written regarding the "UFO situation" worldwide. Reports our leaders have chosen to ignore, for the most part, or perhaps had no interest in looking in to the validity of the communique, so the public might at least know the truth as to what these reports contain.

Nearly every President since Truman has indicated they would investigate these briefings, but have not succeeded in so doing. I understand and believe and that since the President is only a "temporary employee," of the United States, serving a maximum of 8 years as President. Nor is the president likely to have the security clearance, or "need to know" to follow through on his desire to obtain the information. In my opinion the President can't be trusted with such information. Nearly all have tried while in office to no avail, which I'll explain later.

Many of those that are in Congress are active on various committees that could easily look into the UFO situation, but have not done so to any satisfactory degree. Excuses for not doing so are evident in some of the reports I have read. This is not a matter of serving only their constituents they represent from each state, but a national concern that should be looked at by many or all of those that are elected to serve the people they represent. The Constitution states plainly in its opening statement, "We the People", and for me that's been lost by those we elect to represent us in Washington.

When legislation needs to be passed prior to being read by those voting on it, as Nancy Pelosi recently alluded to regarding passage of the "Obama Care bill," we have a major problem with those we elected to represent us. I suppose I shouldn't expect them to take UFO reports under consideration, based on their current records, of not being able to agree on any legislation that currently affects all of us.

Two Presidents, Reagan and Carter reported sightings of UFOs prior to becoming presidents, while governors of their states in California and Georgia. Reagan even addressed the UFO topic at the United

Nations in a speech given there in 1987 while President. President Clinton had an interest in UFOs and asked an aide to look into the topic, who reported to the President that he could not find any information. I've heard rumors about Eisenhower being involved with extraterrestrials, but have never seen any confirmation on that. George Bush, Senior was head of the CIA prior to becoming president, and may well have been the only president with any prior knowledge of UFOs, although he has never publicly mentioned anything, that I'm aware of.

Barry Goldwater was a United States Senator from Arizona who ran for President in the 1960's and lost to Lyndon Johnson in the 1964 Presidential election. He was also a member of the Senate Intelligence committee, and promoted to Brigadier General in the Air Force Reserve. His interest in the possibility of extraterrestrial beings visiting earth has been recorded several times in interviews he did, particularly during an interview with Larry King on CNN in 1988. He had asked General Curtis LeMay about going in to the Blue Room at Hangar 18 at Wright Field in Dayton Ohio, and was told by General LeMay "to go to Hell", and "don't ever ask me that question again."

TRUTHS, LIES, AND GOVERNMENT

There was a time, not too long ago (relatively speaking), that governments and the groups of elites that controlled them did not find it necessary to conscript themselves into wars of disinformation.

Propaganda was relatively straightforward. The lies were much simpler. The control of information flow was easily directed. Rules were enforced with the threat of property confiscation and execution for anyone who strayed from the rigid socio-political structure. Those who had theological, metaphysical or scientific information outside of the conventional and scripted collective world view were tortured and slaughtered. The elites kept the information to themselves, and removed its remnants from mainstream recognition, sometimes for centuries before it was rediscovered.

With the advent of anti-feudalism, and most importantly the success of the American Revolution, elitists were no longer able to dominate information with the edge of a blade or the barrel of a gun. The establishment of Republics, with their philosophy of open government and rule by the people, compelled Aristocratic minorities to plot more subtle ways of obstructing the truth and thus maintaining their hold over the world without exposing themselves to retribution

ND PROPAGANDA T DECEPTION

BRANDON SMITH

from the masses. Thus, the complex art of disinformation was born.

The technique, the “magic” of the lie, was refined and perfected. The mechanics of the human mind and the human soul became an endless obsession for the establishment.

The goal was malicious, but socially radical; instead of expending the impossible energy needed to dictate the very form and existence of the truth, they would allow it to drift, obscured in a fog of contrived data. They would wrap the truth in a Gordian Knot of misdirection and fabrication so elaborate that they felt certain the majority of people would surrender, giving up long before they ever finished unraveling the deceit. The goal was not to destroy the truth, but to hide it in plain sight.

In modern times, and with carefully engineered methods, this goal has for the most part been accomplished. However, these methods also have inherent weaknesses. Lies are fragile. They require constant attentiveness to keep them alive. The exposure of a single truth can rip through an ocean of lies, evaporating it instantly.

In this article, we will examine the methods used to fertilize and promote the growth of disinformation, as well as how to identify the roots of disinformation and effectively cut them, starving out the entire system of fallacies once and for all.

THE ART OF DISINFORMATION

BY BRANDON SMITH

The mainstream media, once tasked with the job of investigating government corruption and keeping elitists in line, has now become nothing more than a public relations firm for corrupt officials and their Globalist handlers. The days of the legitimate “investigative reporter” are long gone (if they ever existed at all), and journalism itself has deteriorated into a rancid pool of so called “TV Editorialist’s” who treat their own baseless opinions as supported fact.

The elitist co-opting of news has been going on in one form or another since the invention of the printing press. However, the first methods of media disinformation truly came to fruition under the supervision of newspaper magnate William Randolph Hearst, who believed the truth was “subjective” and open to his personal interpretation.

LIE BIG RETRACT QUIETLY

Mainstream media sources (especially newspapers) are notorious for reporting flagrantly dishonest and unsupported news stories on the front page, then quietly retracting those stories on the very back page when they are caught. In this case, the point is to railroad the lie into the collective consciousness. Once the lie is finally exposed, it is already too late, and a large portion of the population will not notice or care when the truth comes out.

UNCONFIRMED OR CONTROLLED SOURCES REPORTED AS FACT

Cable news venues often cite information from “unnamed” sources, government sources that have an obvious bias or agenda, or “expert” sources without providing an alternative “expert” view. The information provided by these sources is usually backed by nothing more than blind faith.

CALCULATED OMISSION

Otherwise known as “cherry picking” data. One simple piece of information or root item of truth can derail an entire disinformation news story, so instead of trying to gloss over it, they simply pretend as if it doesn’t exist. When the fact is omitted, the lie can appear entirely rational. This tactic is also used extensively when disinformation agents and crooked journalists engage in open debate.

DISTRACT AND MANUFACTURE RELEVANCE

Sometimes the truth wells up into the public awareness regardless of what the media does to bury it. When this occurs their only recourse is to attempt to change the public’s focus and thereby distract them from the truth they were so close to grasping. The media accomplishes this by “over-reporting” on a subject that has nothing to do with the more important issues at hand. Ironically, the media can take an unimportant story, and by reporting on it ‘ad nauseam,’ cause many Americans to assume that because the media won’t shut-up about it, it must be important!

DISHONEST DEBATE TACTICS

Sometimes, men who actually are concerned with the average American's pursuit of honesty and legitimate fact-driven information break through and appear on T.V. However, rarely are they allowed to share their views or insights without having to fight through a wall of carefully crafted deceit and propaganda. Because the media know they will lose credibility if they do not allow guests with opposing viewpoints every once in a while, they set up and choreograph specialized T.V. debates in highly restrictive environments which put the guest on the defensive, and make it difficult for them to clearly convey their ideas or facts.

STOPPING DISINFORMATION

The best way to disarm disinformation agents is to know their methods inside and out. This gives us the ability to point out exactly what they are doing in detail the moment they try to do it. Immediately exposing a disinformation tactic as it is being used is highly destructive to the person utilizing it. It makes them look foolish, dishonest and weak for even making the attempt. Internet trolls most especially do not know how to handle their methods being de-constructed right in front of their eyes and usually fold and run from debate when it occurs.

The truth is precious. It is sad that there are so many in our society who have lost respect for it; people who have traded in their conscience and their soul for temporary financial comfort while sacrificing the stability and balance of the rest of the country in the process.

The human psyche breathes on the air of truth. Without it, humanity cannot survive. Without it, the species will collapse, starving from lack of

intellectual and emotional sustenance. Disinformation does not only threaten our insight into the workings of our world; it makes us vulnerable to fear, misunderstanding, and doubt: all things that lead to destruction. It can drive good people to commit terrible atrocities against others, or even against themselves. Without a concerted and organized effort to defuse mass-produced lies, the future will look bleak indeed.

THE MASTER OF LIES
JOSEPH GOEBBELS

RULE

THE ALINSKY TACTICS

TV pundits are often trained in what are commonly called “*Alinsky Tactics*.”

Saul Alinsky was a moral relativist, and champion of the lie as a tool for the “greater good”; essentially, a modern day Machiavelli.

His “*Rules for Radicals*” were supposedly meant for grassroots activists who opposed the establishment and emphasized the use of any means necessary to defeat one’s political opposition. But is it truly possible to defeat an establishment built on lies, by use of even more elaborate lies, and by sacrificing one’s ethics? In reality, his strategies are the perfect format for corrupt institutions and governments to dissuade dissent from the masses. Today, Alinsky’s rules are used more often by the establishment than by its opposition.

Alinsky’s Strategy: Win At Any Cost, Even If You Have To Lie

Alinsky’s tactics have been adopted by governments and disinformation specialists across the world, but they are most visible in TV debate. While Alinsky sermonized about the need for confrontation in society, his debate tactics are actually designed to circumvent real and honest confrontation of opposing ideas with slippery tricks and diversions.

TACTICS FOR RADICALS

KNOWLEDGE IS POWER
ARM YOURSELF

1 - Power is Not Only What You Have, But What the Enemy Thinks You Have

We see this tactic in many forms. For example, projecting your own movement as mainstream, and your opponent's as fringe. Convincing your opponent that his fight is a futile one. Your opposition may act differently, or even hesitate to act at all, based on their perception of your power. How often have we heard this line: "The government has predator drones. There is nothing the people can do now..." This is a projection of exaggerated invincibility designed to elicit apathy from the masses.

2 - Never Go Outside the Experience of Your People, and Whenever Possible, Go Outside the Experience of the Enemy

Don't get drawn into a debate about a subject you do not know as well as or better than your opposition. If possible, draw them into such a situation instead. Go off on tangents. Look for ways to increase insecurity, anxiety and uncertainty in your opposition. This is commonly used against unwitting interviewees on cable news shows whose positions are set up to be skewered. The target is blindsided by seemingly irrelevant arguments that they are then forced to address. In television and radio, this also serves to waste broadcast time to prevent the target from expressing his own position.

3 - Make the Enemy Live-Up to Their Own Book of Rules!

The objective is to target the opponent's credibility and reputation by accusations of hypocrisy. If the tactician can catch his opponent in even the smallest misstep, it creates an opening for further attacks, and distracts away from the broader moral question.

4 - Ridicule is Man's Most Potent Weapon

"Ron Paul is a crackpot." "Gold bugs are crazy." "Constitutionalists are fringe extremists." Baseless ridicule is almost impossible to counter because it is meant to be irrational. It infuriates the opposition, which then reacts to your advantage. It also works as a pressure point to force the enemy into concessions.

5 - A Good Tactic is one the People Enjoy

The popularization of the term "Tea baggers" is a classic example; it caught on by itself because people seem to think it's clever, and enjoy saying it. Keeping your talking points simple and fun helps your side stay motivated, and helps your tactics spread autonomously, without instruction or encouragement.

6 - A Tactic that Drags on Too Long Becomes a Drag

Don't become old news. If you keep your tactics fresh, it's easier to keep your people active. Not all disinformation agents are paid. The "useful idiots" have to be motivated by other means. Mainstream disinformation often changes gear from one method to the next and then back again.

Cats everywhere are having a hard time smelling their litter boxes.

7 - Keep the Pressure On

Keep trying new things to keep the opposition off balance. As the opposition masters one approach, hit them from the flank with something new. Never give the target a chance to rest, regroup, recover or re-strategise. Take advantage of current events and twist their implications to support your position. Never let a good crisis go to waste.

8 - The Threat is Usually More Terrifying than the Thing Itself

This goes hand in hand with Rule No. 1. Perception is reality. Allow your opposition to expend all of its energy in expectation of an insurmountable scenario. The dire possibilities can easily poison the mind and result in demoralization.

9 - The Major Premise for Tactics is to Develop Operations to Maintain Constant Pressure on the Opposition

The objective of this pressure is to force the opposition to react and make the mistakes that are necessary for the ultimate success of the campaign.

10 - If you Push a Negative Hard and Deep, it will Break into the Counter-Side

As grassroots activism tools, Alinsky tactics have historically been used (for example, by labor movements or covert operations specialists) to force the opposition to react with violence against activists, which leads to popular sympathy for the activists' cause. Today, false (or co-opted) grassroots movements and revolutions use this technique in debate as well as in planned street actions and rebellions (look at Syria for a recent example).

11 - The Price of a Successful Attack is a Constructive Alternative

Never let the enemy score points because you're caught without a solution to the problem. Today, this is often used offensively against legitimate activists, such as the opponents of the Federal Reserve. Complain that your opponent is merely "pointing out the problems." Demand that they offer not just "a solution", but THE solution. Obviously, no one person has "the" solution. When he fails to produce the miracle you requested, dismiss his entire argument and all the facts he has presented as pointless.

12 - Pick the Target, Freeze It, Personalize It, and then Polarize It

Cut off the support network and isolate the target from sympathy. The target's supporters will expose themselves. Go after individual people, not organizations or institutions. People hurt faster than institutions.

The next time you view a televised debate, watch the pundits carefully, you will likely see many, if not all, of the strategies mentioned in this article used on one or more unsuspecting individuals attempting to tell the truth. Depending on the television source. 🗣️

PARALLEL UNIVERSES ALTERNATE REALITY

Is it possible to live another life in a parallel universe or omniverse? When you experience a déjà vu, are you drawing this experience from a parallel universe?

A hypothetical self-contained separate reality coexisting with one's own. A specific group of parallel universes is called a 'multiverse', although this term can also be used to describe the possible parallel universes that constitute reality. While the terms 'parallel universe' and 'alternative reality' are generally synonymous and can be used interchangeably in most cases, there is sometimes an additional connotation implied with the term 'alternative reality' that implies that the reality is a variant of our own. The term 'parallel universe' is more general, without any connotations implying a relationship, or lack of relationship, with our own universe.

THE INFORMAT INTERNET DIS

Internet trolls, also known as “paid posters” or “paid bloggers,” are increasingly and openly being employed by private corporations as well governments, often for marketing purposes and for “public relations” (Obama is notorious for this practice). Internet “trolling” is indeed a fast growing industry, and although Trolls will use a wide variety of strategies, some are quite unique to the Internet - here are just a few to watch out for.

A Democratic candidate for U.S. Senate in 2012, Richard Carmona, had launched a Facebook – style web page attacking Republican Senate candidate Jeff Flake for failing to protect workers from having to disclose their social media site passwords.

ATION HIGHWAY INFORMATION

Make Outrageous Comments Designed to Distract or Frustrate:

An Alinsky tactic used to make people emotional, although less effective because of the impersonal nature of the Web.

Pose as a Supporter of the Truth, Then Make Comments That Discredit the Movement:

We have seen this even on our own forums — trolls pose as supporters of the Liberty Movement, then post long, incoherent diatribes so as to appear either racist or insane. The key to this tactic is to make references to common Liberty Movement arguments while at the same time babbling nonsense, so as to make those otherwise valid arguments seem ludicrous by association. In extreme cases, these “Trojan Horse Trolls” have been known to make posts which incite violence — a technique obviously intended to solidify the false assertions of the think tank propagandists like the SPLC, which purports that Constitutionalists should be feared as potential domestic terrorists

Dominate Discussions:

Trolls often interject themselves into productive Web discussions in order to throw them off course and frustrate the people involved.

Pre-written Responses:

Many trolls are supplied with a list or database with pre-planned talking points designed as generalized and deceptive responses to honest arguments. When they post, their words feel strangely plastic and well rehearsed.

False Association:

This works hand in hand with item No. 2, by invoking the stereotypes established by the “Trojan Horse Troll.” For example: calling those against the Federal Reserve “conspiracy theorists” or “lunatics”; deliberately associating anti-globalist movements with racists and homegrown terrorists, because of the inherent negative connotations; and using false associations to provoke biases and dissuade people from examining the evidence objectively.

False Moderation:

Pretending to be the “voice of reason” in an argument with obvious and defined sides in an attempt to move people away from what is clearly true into a “gray area” where the truth becomes “relative.”

Straw Man Arguments:

A very common technique. The troll will accuse his opposition of subscribing to a certain point of view, even if he does not, and then attacks that point of view. Or, the troll will put words in the mouth of his opposition, and then rebut those specific words.

Sometimes, these strategies are used by average people with serious personality issues. However, if you see someone using these tactics often, or using many of them at the same time, you may IN FACT be dealing with a paid Internet troll.

And YES, people do get paid for doing this. 🧐

With this quality
NOBODY will be
able to cheat!

TERROR THE TRUTH BEHIND THE C.I.A.

“Americans can no longer claim ignorance of the horrors committed by the CIA. They can not allow this guise of “The War on Terror” to continue, especially since it roots began as a terrorist organization to spread fear.”

by Peter Meyer

Americans are largely unaware of the enormity of the crimes committed by their government (or rather, by individuals within their government), but in a representative democracy, as such allegedly exists in the U.S.A. can the people deny responsibility for the actions and policies of their government? How long can they allow their government, whose leaders they elect, to commit one atrocity after another and at the same time pretend that they themselves are innocent of any wrongdoing?

CENTRAL INTELLIGENCE AGENCY
UNITED STATES OF AMERICA

In September 2001, President George W. Bush declared a “War on Terrorism” and vowed to destroy all terrorist organizations “with a global reach.” For the good of both America and the rest of the world he should start with the largest international terrorist organization of them all — his own CIA.

The concept of “terrorism” is unclear and there is no definition generally agreed upon for the term “terrorist.” It is however, a tactic; a means to a specific outcome — a tactic often used as a possible course of action.

Once you understand this, it becomes clear that it is ridiculous to use as phrase to declare a “War on Terrorism,” as one cannot defeat a tactic. To declare a war on terrorism is to declare an intentional ‘perpetual war.’

“Terrorism” is a fear tactic defined as a practice of the deliberately

The CIA is not now, nor has it ever been a central intelligence agency. It is in fact the covert action arm of the President's foreign policy advisers, that acts in the capacity to either over-throw or support foreign governments and once completed, report those results back to the president of the United States as intelligence!

inflicting harm, injury, death, and/or destruction upon a civilian target sufficient to cause horror, revulsion, or despair among civilian populations and/or their political leaders, with the goal of causing those populations or political leaders to act in a way desired by the terrorists directly or indirectly.

Terrorist actions differ from military actions in two respects: (1) in a military action, the target is a military target, and provides direct support to a military force, not civilians. A military force being some type of organization that is usually, but not necessarily, a state regime’s targeted military force and their supporting infrastructure; often an opposing state and their internal organization. (2) A military action’s are designed to destroy a particular military target; one that hinders their capability of opposition from the attacking side rather than to effect a political goal, although, a military action is usually conducted to support a larger political strategy.

The distinction between “terrorist” or “military” action is not always clear, for several reasons:

- The distinction between a military target and a civilian target may be convoluted. For example, a police station may be either a military target or a civilian target...dependent by what activities the occupants have engaged themselves.
- The goal of a particular militant action may be part military and part political. These aims can usually be distinguished on whether the instigator is a state using its military forces, or they somewhat blurred; when the instigator is a non-state entity like a ‘resistance’ group.
- The debate being, what is ‘terrorist activity’ and what is ‘military activity.’ It all depends on the viewpoint of who is passing judgement. This is often the case when there is violent opposition by those inhabiting a specific territory to the unwanted control, or occupation of that territory by some external entity, often a state; e.g. the West Bank of Israel, the Basque region of Spain, or the Kashmir regions of India.
- Militant groups among the population of an occupied territory may carry out attacks against both ‘military’ and ‘civilian’ targets to disrupt the occupation of the invading power as an attempt to persuade the occupying force to end its occupation and withdraw what control they may have gained.

From the point-of-view of the occupying power, such groups are composed of “terrorists,” but from the point of view of the inhabitants in the occupied territory, they are either “freedom fighters” or “patriots”; militant groups engaged in an armed conflict with the occupying enemy state (Israel, Spain, or India). *“One man's terrorist is another man's freedom fighter.”* Actually, as Noam Chomsky stated, the distinction is quite simple, “If **they** do it, it's called “terrorism;” if **we** do it, it becomes “counter-terrorism.”

That CIA was created after World War II from an Office of Strategic Services (the OSS), which was riddled with Nazis, through an act of Congress, that can only be eliminated by Congress in the same manner. Its official purpose was to function primarily as an intelligence-gathering organization for the President of the United States — or at least, that's what we the people are

Continued on Page 54

"OF COURSE THE PEOPLE DON'T WANT WAR. BUT AFTER ALL, IT'S THE LEADERS OF THE COUNTRY WHO DETERMINE THE POLICY, AND IT'S ALWAYS A SIMPLE MATTER TO DRAG THE PEOPLE ALONG WHETHER IT'S A DEMOCRACY, A FASCIST DICTATORSHIP, OR A PARLIAMENT, OR A COMMUNIST DICTATORSHIP. VOICE OR NO VOICE, THE PEOPLE CAN ALWAYS BE BROUGHT TO THE BIDDING OF THE LEADERS. THAT IS EASY.

ALL YOU HAVE TO DO IS TELL THEM THEY ARE BEING ATTACKED, AND DENOUNCE THE PACIFISTS FOR LACK OF PATRIOTISM, AND EXPOSING THE COUNTRY TO GREATER DANGER."

— HERMAN GOERING
AT THE NUREMBERG TRIALS

CENTRAL INTELLIGENCE AGENCY

Collect, analyze, evaluate, disseminate foreign intelligence and conduct covert operations.

\$ | 4.7 Billion

Central Intelligence Agency. In 1947, President Harry Truman signed the National Security Act, which led to the creation of the Central Intelligence Agency (CIA) on July 26, 1947. The attack on Pearl Harbor and subsequent urgencies of World War II prompted the United States to create a group to conduct foreign intelligence operations. Over the years, the CIA has evolved and expanded its role as an intelligence organization with operatives in countries around the globe.

The CIA remains the primary external intelligence agency operating outside of the United States. It is organized into five components: the Directorate of Operations, the Directorate of Analysis, the Directorate of Science and Technology, the Directorate of Support, and the recently created Directorate of Digital Innovation. Using both human and signals intelligence sources, the CIA “collects, analyzes, and disseminates intelligence gathered on foreign nations.” According to its mission statement, the Agency’s “information, insights, and actions consistently provide tactical and strategic advantage for the United States.”

NATIONAL SECURITY AGENCY

Protect the government’s information systems and intercept foreign signals intelligence information.

\$ | 0.8 Billion

The National Security Agency (NSA) is at the forefront of communications and information technology, serving as a critical enabler of sensitive intelligence collection. As a combat support agency:

The National Security Agency/ Central Security Service (NSA/CSS) leads the U.S. Government in cryptology that encompasses both Signals Intelligence (SIGINT) and Information Assurance (IA) products and services, and enables Computer Network Operations (CNO) in order to gain a decision advantage for the Nation and our allies under all circumstances.

Aside from lending support to other Intelligence Community agencies, the NSA also aids military customers, national policy-makers, counter-terrorism and counter-intelligence communities, and key international allies.

NATIONAL RECONNAISSANCE OFFICE

Design, build and operate the nation’s signals intelligence reconnaissance systems.

\$ | 0.3 Billion

The National Reconnaissance Office (NRO) is responsible for the development and operation of the nation’s signals intelligence reconnaissance systems. As a combat support agency, the NRO works with other agencies, such as the DOD. The NRO’s work is of great importance to national security because they can identify potential trouble spots in the world, help plan for them, and monitor the situation.

DEPARTMENT OF DEFENSE

<i>\$ in billions</i>	FY 2014 Actual	FY 2015 Enacted

NATIONAL GEOSPATIAL-INTELLIGENCE PROGRAM

Imagery and map-based intelligence used for national security, U.S. military operations, navigation and humanitarian aid efforts.

\$4.9 Billion

Initially formed in 1972 as the Defense Mapping Agency (DMA) and later renamed the National Imagery and Mapping Agency (NIMA), the National Geospatial-Intelligence Agency (NGA) serves a dual role as DOD combat support and U.S. Intelligence Community agency, as do all of the department’s intelligence elements. Cartographers, analysts, and other NGA personnel gather imagery and furnish geospatial analytical products applicable to national security, military operations, and humanitarian aid efforts.

GENERAL DEFENSE INTELLIGENCE PROGRAM

Provide assessments of foreign military intentions and capabilities to policy-makers and military commanders.

\$4.4 Billion

Operating under the jurisdiction of the Department of Defense (DOD) but also as a member of the Intelligence Community under the purview of the DNI, the Defense Intelligence Agency (DIA) is the major producer of information related to foreign military intelligence. As a combat support agency within the DOD, the DIA collects and analyzes intelligence on foreign militaries, conducts surveillance and reconnaissance operations, and provides crucial information to war fighters, defense policymakers, and force planners.

The DIA is organized into four directorates: the Directorate of Operations, Directorate for Analysis, Directorate for Science and Technology, and Directorate for Mission Services. There also are five centers. Four cover regions around the globe: the Americas Center, Asia/Pacific Center, Europe/Eurasia Center, and Middle East/Africa Center. The fifth, the Defense Combating Terrorism Center, is focused on transnational terrorism threats and support for counter-terrorism operations by the war-fighter.

FAH FLF

by Kevin King

What exactly does the term false-flag mean and why is it used? The term false-flag is a naval term from the age of sail that refers to a ship flying the colors (flag) of a country other than the one to which the ship belonged. They did this for multiple reasons but the most common was to lure an enemy vessel into gun or boarding range and then at the last moment drop the false-flag and run up the true colors before attacking. It was fair sport to use false-flags but considered

immoral/unethical to attack under a false-flag and rarely done. However, that was a different age...

The simplest definition of a false-flag is an event in which the actual perpetrators and the reported or blamed perpetrators are different. The classic use of a false-flag, and hence the military origin of its name, goes as follows. Country A's King wants to conquer and loot Country B's land to enrich himself. Of course, if this is what King A tells his army they may choose not to fight or revolt, or best case their effort will be lacking. In order to get the most out of their soldiers, the commanders need them to be emotionally involved... anger, hatred, or revenge. Now the skilled orator and manipulator might be able to create this mood with just words. Yet not many have this level of skill. It is much easier to motivate and/or raise an army if one's country has been attacked hence you are acting in defense. This is where the false-flag comes in.

Country A's King and its top General(s) conspire to launch an attack against itself, claiming that the attackers were from Country B. The attack needs to be big enough to create real panic and fear, and for maximum effect, there needs to be real deaths. The attackers need to be convincing in their role as soldiers of Country B, so clothes, uniform, weapons need to match appropriately. The likelihood of success of the attack is high since it would be unexpected or a surprise attack. Technically, even if the attack were to fail, the fact remained that an attack could be enough to initiate a response. King A could use men from

FALSE FLAGS

within to execute the attack, or it might be better to use mercenaries. Regardless, a successful attack will incense the populace against the ‘evil’ Country B and, therefore, justify an invasion.

The above is just one example, or a classic example of a false-flag. However, it is very important to understand that the false-flag event can take on countless forms. I recently read a comment where the commentator stated that because actual people died it was not a false-flag. The defining characteristic of a false-flag event is not associated to a specific type. Whether or not actors or non-actors actually died in the event is irrelevant, regardless if the event ever occurred or not. It simply means the entire event, and the manner, by which the media reports it, is nothing but a fabrication designed to fool a specific group of people into believing the event was real.

One defining characteristic is that the *true* perpetrator of the event is really, never known or revealed, nor is the author or director/producer of the ‘false-flag production’ ever revealed. The audience’s attention becomes fixated on the stage; the villain, clearly identified by an official ‘broadcaster’ acting out the narrative as a reporter, and often known by the unsuspecting public...But who’s behind the curtain of deceit?

When a ‘false-flag event is staged, it is portrayed as ‘real’ event, the actors in the event are irrelevant, but what IS important is ‘who produced it!’ and “why?” Who are the people that wrote, directed, and funded the event? These are

the REAL perpetrators, NOT the actors playing it out on the ‘set’ (stage). *Cui Bono?* Who Benefits?

The other defining characteristic is that the event is a catalyst for the true objectives. Thus the false-flag uses the classic Hegelian dialectic of Problem-Reaction-Solution. From the example above, the surprise attack is the ‘problem’ (a threat to personal safety), the population’s anger, fear, concern is the desired ‘reaction’, and the ‘solution’ is to invade the offender to eliminate the threat, and enabled by the population’s reaction. The false-flag then is a deliberately created illusion whose purpose is creating the environment in which the objective or ‘solution’ will be accepted and thus implemented. 🗨️

Washing with Softsoap Antibacterial for 20 seconds kills harmful bacteria like *S. aureus* & *E. coli*.

COVERT AGENTS INFILTRATE THE INTERNET TO MANIPULATE, DECEIVE, AND DESTROY, REPUTATIONS

One of the many pressing stories that remains to be told from the Snowden archive is how western intelligence agencies are attempting to manipulate and control online discourse with extreme tactics of deception and reputation-destruction. It's time to tell a chunk of that story, complete with the relevant documents.

Internet trolls, also known as “paid posters” or “paid bloggers,” are increasingly and openly being employed by private corporations as well governments, often for marketing purposes and for “public relations” (Obama is notorious for this practice). Internet “trolling” is indeed a fast growing industry.

1 - MAKE OUTRAGEOUS COMMENTS DESIGNED TO DISTRACT, REDIRECT, OR FRUSTRATE

An Alinsky tactic used to make people emotional, although less effective because of the impersonal nature of the Web.

2 - POSE AS A SUPPORTER OF THE TRUTH, THEN MAKE COMMENTS THAT DISCREDIT THE MOVEMENT

We have seen this even on our own forums — trolls pose as supporters of the Liberty Movement, then post long, incoherent diatribes so as to appear either racist or insane.

The key to this tactic is to make references to common Liberty Movement arguments while at the same time babbling nonsense, so as to make those otherwise valid arguments seem ludicrous by association.

In extreme cases, these “Trojan Horse Trolls” have been known to make posts which incite violence — a technique obviously intended to solidify the false assertions of the think tank propagandists like the SPLC, which purports that Constitutionalsists should be feared as potential domestic terrorists.

3 - DOMINATE DISCUSSIONS

Trolls often interject themselves into productive Web discussions in order to throw them off course and frustrate the people involved.

4 - PRE-WRITTEN RESPONSES

Many trolls are supplied with a list or database with pre-planned talking points designed as generalized and deceptive responses to honest arguments. When they post, their words feel strangely plastic and well rehearsed.

5 - FALSE ASSOCIATION

This works hand in hand with item No. 2, by invoking the stereotypes established by the “Trojan Horse Troll.” For example: calling those against the Federal Reserve “conspiracy theorists” or “lunatics”; deliberately associating anti-globalist movements with racists and home-grown terrorists, because of the inherent negative connotations; and using false associations to provoke biases and dissuade people from examining the evidence objectively.

6 - FALSE MODERATION

Pretending to be the “voice of reason” in an argument with obvious and defined sides in an attempt to move people away from what is clearly true into a “grey area” where the truth becomes “relative.”

7 - STRAW MAN ARGUMENTS

A very common technique. The troll will accuse his opposition of subscribing to a certain point of view, even if he does not, and then attacks that point of view. Or, the troll will put words in the mouth of his opposition, and then rebut those specific words.

Sometimes, these strategies are used by average people with serious personality issues. However, if you see someone using these tactics often, or using many of them at the same time, you may be dealing with a paid internet troll.

8 - PROTECTING YOURSELF FROM DISINFORMATION

The best way to disarm disinformation agents is to know their methods inside and out. This gives us the ability to point out exactly what they are doing in detail the moment they try to do it.

TROLLS USE A WIDE VARIETY OF STRATEGIES SOME, OF WHICH ARE UNIQUE ONLY ON THE INTERNET.

HOW COVERT AGENTS INFILTRATE THE INTERNET TO MANIPULATE, DECEIVE, AND DESTROY REPUTATIONS

DISCREDIT THE TARGET

- Setup a honey-trap
- Change their photos on social networking
- Write a blog purporting to be one of their victims
- Email/text their colleagues, neighbors, friends, etc.

DISCREDIT A COMPANY

- Leak confidential information to companies and the press via blogs, social media, comments, etc.
- Post negative information on appropriate forums
- Stop deals / ruin business relationships

DISCREDIT A COMPANY

- Leak confidential information to companies and the press via blogs, social media, comments, etc.
- Post negative information on appropriate forums
- Stop deals / ruin business relationships

INFLUENCE, DISRUPT, MANIPULATE

- Individuals, groups, and global interaction
- By using psychology, deceptions, performance, & media
- By acting professionally, elegantly, creatively, and intuitively

GAMBITS OF DECEPTION

- Attention - control, target, perception repetitively
- Logic - exploit, present, ruse, and swap controlled information
- By acting professionally, elegantly, creatively, and intuitively
- Monitor behavior, call to action, shift perceived behaviour, and channel efforts to use behaviour as an outcome

Immediately exposing a disinformation tactic as it is being used is highly destructive to the person utilizing it. It makes them look foolish, dishonest and weak for even making the attempt. Internet trolls most especially do not know how to handle their methods being de-constructed right in front of their eyes and usually fold and run from debate when it occurs.

The truth is precious. It is sad that there are so many in our society who have lost respect for it; people who have traded in their conscience and their soul for temporary financial comfort while sacrificing the stability and balance of the rest of the country in the process. The human psyche breathes on the air of

truth. Without it, humanity cannot survive. Without it, the species will collapse, starving from lack of intellectual and emotional sustenance.

Disinformation does not only threaten our insight into the workings of our world; it makes us vulnerable to fear, misunderstanding and doubt: things that lead to destruction and drives good people to commit terrible atrocities against others and against themselves. Without a concerted and organized effort to defuse mass-produced lies, the future will look bleak indeed. 🤖

AND NOW YOU 🤖 🤖 🤖

A BRIEF HISTORY ON TELEPORTATION

BY COLUMNIST ARNOU

VOYAGER1, 649 KM AWAY **MORIS, 700 KM AWAY**

THE VOYAGER IS CURRENTLY IN INTERSTELLAR SPACE, HEADED TOWARDS THE FIRST QUOTE OF A SPEED OF 545 MILLION KM A FEW HUNDRED METERS SHORTER TO REACH THE HUBBY RANGE IN ONE HUNDRED.

BASIC INFORMATION ABOUT THE EARTH:

- AXIAL TILT: 23.4363 DEGREES
- ORBITAL VELOCITY: 29.78 KM/S
- ORBITAL PERIOD: 365.256 DAYS
- DIAMETER: 12,756 KM
- MASS: 5.972 E23 KG
- GRAVITY: 9.80665 M/S²
- ATMOSPHERIC OXYGEN: 21%
- ATMOSPHERIC NITROGEN: 78%
- ROTATION PERIOD: 23.934 HOURS

TELEPORTATION IS NOT WHAT YOU THINK!

While commonly seen as an advanced futuristic technology capable of moving people across great distances instantaneously, teleportation may have been happening for millions of years without any technology involved.

Of course, the existence of anything in nature, including objects moving faster than light or disappearing and reappearing instantly elsewhere, usually means science will eventually discover "how," and learn to do the same thing using machines. Yet, strange events have been described in the real world, and the word "teleportation" was coined to describe them.

ION
LD ISEN

The word "teleportation" was not invented for fantasy fiction. It is serious business and "quantum teleportation" is already a reality in science labs now, moving particles. But if it happens in nature, could mysterious disappearances of property or people that have gone without any explanation be the result of strange cosmic forces just causing things to "teleport"?

Contrary to science fiction tropes, "teleportation", as coined by Charles Hoy Fort in 1931, is a "transportory force" that already exists in the universe. Fort suggested it is a natural event, sometimes responsible for reports of so-called paranormal activity.

There is one article using the word "teleport" quite differently before Fort in 1878, likely the first ever to use the word. The article was talking about a future machine that might transport people instantaneously, in wild speculation following the invention of the telephone two years earlier. That is more consistent with our already mentioned science fiction iteration of teleportation, as you have seen on Star Trek.

In the vein of speculation about teleportation as a natural force, spontaneous human combustion (SHC) is another similar mystery, although there are now scientific and medical explanations of that phenomenon. Ball lightning (also "fireballs" or "globes of flame" when seen as a supernatural manifestation) was also a Fortean phenomenon, until it was found to be real and photographed. It is still not explained scientifically. Even stranger and rarer than those other descriptions, teleportation gets a lot less attention.

Imaginations are still captured by the disappearances of aircraft without a trace, such as the vanished Malaysian Airlines Flight MH370 on 8 March 2014 . What could have made such a large object, and so many people, simply disappear without a trace and elude search parties from a multitude of different nations? As with many such disappearances, the mystery does not end at the disappearance, and there is reason to believe the plane survived intact. Signals from the phones of the passengers have been received when calls are attempted, but there is no answer. The searching authorities have been unable to pinpoint these phone signals.

In 1880, a farmer named David Lang reportedly disappeared into thin air in plain view of several witnesses. He was never seen again, although subsequently a "circle" formed inexplicably in the area where he had stood. Some months later, his wife reported that she could hear his voice crying out for help from the last place he had been seen.

On a more trivial note, most people have been stumped at least once in their lives by the

Science Photo Library/Getty Images

disappearance of an object. A wedding ring may be dropped, and it is unlikely that the owner would give up the search easily. If it happened outdoors, there are any number of places it could have gone. But what if it happened in a room, with no people who could have stolen it, no gaps in the floorboards, no open windows it could have bounced out of? What if the entire room was stripped bare and every square centimeter examined, and still nothing turned up? Such an event is impossible based on our current understanding of the universe, yet it happens all the time.

Curtis Ellis writes, "There have been bizarre accounts of organic as well as inorganic matter falling from the sky such as frogs, fish, snakes, mussels, worms, alligators, blood and flesh, straw, hazelnuts, slime, stones, artifacts, and many other materials." Ellis refers in part to strange showers of frogs or fish, which can be carried away by violent storms, but also to other showers that cannot be explained by science. While a hurricane could easily be to blame for a shower of frogs and fish, a much different kind of vortex would be needed to shower stones or other heavy materials.

The "wormhole" theory (or Einstein-Rosen Bridge), a respected scientific hypothesis, contains a possible

explanation. Such features could connect different locations in space-time and transport objects instantaneously. An object can disappear, only to reappear at another time. It may vanish from one space, only to appear at another space.

If we assume that such a vortex can exist, they could be everywhere. They might exist more abundantly at smaller scales where they are harder to detect, picking up particles and depositing them a short distance away. On rare occasions, they might be large enough to envelop personal items, such as your key. On far rarer occasions, they may capture cars, which would account for them blinking out of existence as some people have reported. In the rarest of all cases, entire buildings vanish in so-called paranormal experiences.

Once such things vanish, where do they go? If the agency responsible is a wormhole, then the vanishing objects could have gone anywhere. They could have been deposited on another planet, or in deep space. As there is no limit to how far a wormhole can stretch, in theory, they could take an object anywhere in the universe with no hope of return. Conversely, anything, no matter how alien or seemingly impossible, could rain down from our own skies, carried from elsewhere in the universe.

While it is easy to dismiss the idea of vanished people and objects using prosaic explanations and blaming hysteria for more unusual accounts of disappearances, there are undeniably some events that cannot be explained. Those extraordinary accounts require improbable explanations to make any sense of them.

There might not be vehicles from outer space abducting people, and there might not be a type of space vortex capable of moving people and objects from one place to the next; however, there are undeniably strange forces at work in the universe, and many such forces would appear impossible according to known scientific facts. If we use certain elements of cosmology such as the wormhole theory, however, the possible explanations are more abundant.

The idea that anything could vanish at any time may seem disquieting, but these accounts are so rare that the odds of natural teleportation would still be astronomical. 🤔

From a mystery man that arrived at an airport from an unknown country, to an American soldier claiming to be from the year 2036. We take a look at 5 Mysterious Time Traveling Stories.

ARE WORMHOLES EVERYWHERE?

BY GREG KESTIN

In a universe where faster-than-light travel isn't possible, wormholes—hypothetical shortcuts across spacetime that link one part of the universe with another—give hope to romantics who wish to jump millions of light years in a single bound. But are wormholes more than a sci-fi portal to zip us between galaxies? Recent research suggests that they actually describe microscopic channels between particles all around us.

As far-out as wormholes sound, they are described by of Einstein's theory of general relativity, the same theory that describes the force of gravity. General relativity expresses gravity as the smooth bending of space and time. For example, the sun creates a dimple in the fabric of spacetime; the planets "roll" around the periphery of the dimple. A wormhole is more than a dimple, though. It is

like a tunnel between two parallel sheets of spacetime.

The details about wormholes remain fuzzy, but new research suggests that they may be fundamentally related to quantum entanglement. Quantum entanglement is a phenomenon where pair of objects are bound together. No matter how far apart they fly, they will "know" about each other—even if they are on opposite sides of the galaxy. Which, when you think about it, sounds a lot like a wormhole.

A pair of independent teams arrived at the same conclusion. Here's Katia Moskvitch, writing for AAAS Science Now:

- Kristan Jensen of the University of Victoria in Canada and Andreas Karch of

THE COSMIC UNIVERSE

the University of Washington, Seattle, start by imagining an entangled quark-antiquark pair residing in ordinary 3D space, as they described online on 20 November in *Physical Review Letters*. The two quarks rush away from each other, approaching the speed of light so that it becomes impossible to pass signals from one to the other. The researchers assume that the 3D space where the quarks reside is a hypothetical boundary of a 4D world. In this 3D space, the entangled pair is connected by a kind of conceptual string. But in the 4D space, the string becomes a wormhole.

- Julian Sonner of the Massachusetts Institute of Technology in Cambridge then builds upon Karch's and Jensen's work. He imagines a quark-antiquark pair

that pops into existence in a strong electric field, which then sends the oppositely charged particles accelerating in opposite directions. Sonner also finds that the entangled particles in the 3D world are connected by a wormhole in the 4D world, as he also reported online on 20 November in *Physical Review Letters*.

Such pairs of particles are ubiquitous, though we don't know for certain whether wormholes exist between them. For now, these findings remain theoretical. We haven't even found hard evidence of large wormholes yet, let alone microwormholes. Both remain hypothetical objects of thought experiments, but as we learned from Einstein, such musings can lead to great revolutions in physics. 🌀

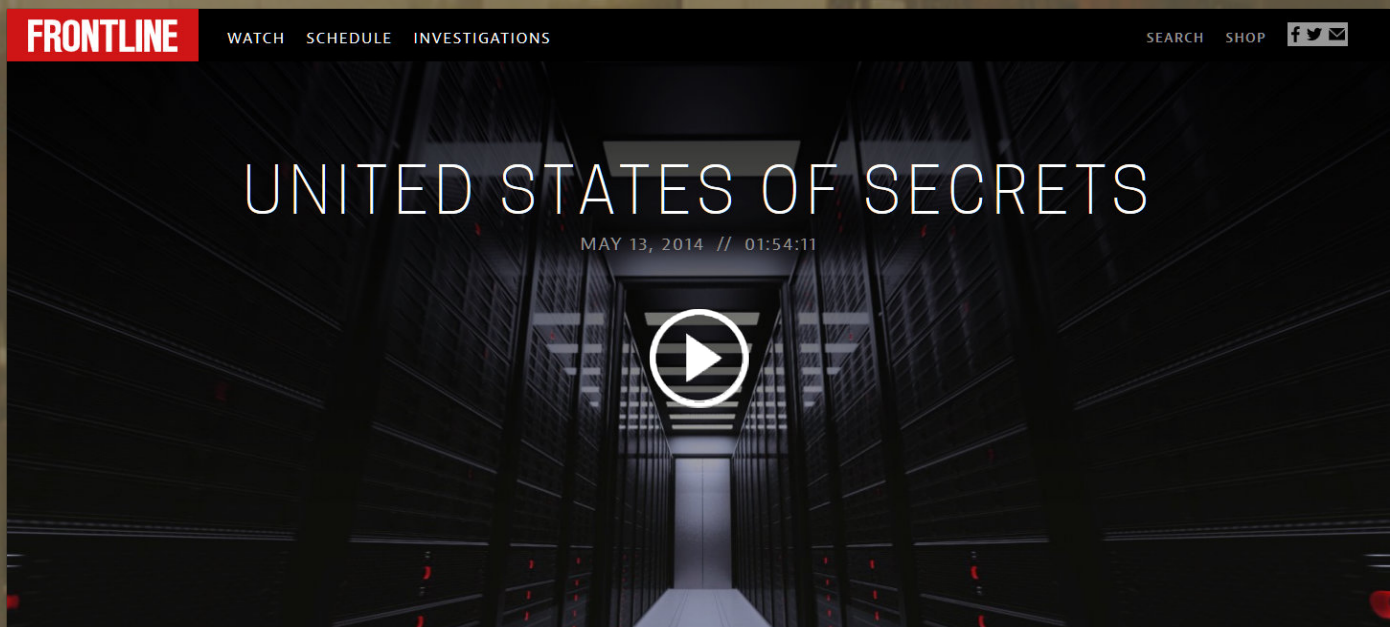

supposed to believe, when in fact it's now and always has been something entirely different what Congress envisioned.

"The CIA is not now nor has it ever been a central intelligence agency. It is the covert action arm of the President's foreign policy advisers. In that capacity, it overthrows or supports foreign governments while reporting "intelligence" justifying those activities. It shapes its intelligence, even in such critical areas as Soviet nuclear weapons capability, to support presidential policy. Disinformation is a large part of its covert action responsibility, and the American people are the primary target of its lies."
— Ralph McGehee, *Deadly Deceits*

The CIA has been a terrorist organization from its beginnings, when it included a large number of former Nazis — former members of the Gestapo and the Nazi military intelligence, including Reinhard Gehlen, a Nazi War Criminal. Unlike smaller terrorist

organizations such as ETA (Basque) the CIA does not normally engage in terrorism by sending its employees to plant bombs, rather it tends to act through intermediaries and agents, that often involves the use of U.S. military personnel.

The fact that CIA is a terrorist organization becomes clear from its record of terrorist activities they call "counterinsurgency" or "low intensity conflict." It's not that the CIA is a rogue organization out of control, the CIA implements the policies determined by the President of the United States, including unofficial U.S. government policy. Determining the CIA is a terrorist organization also implies that the United States is a terrorist state. Considering the millions of deaths that the U.S. has caused, and the enormous suffering that its international policies have produced through its hypocrisy in condemning other countries as "terrorist states" would be ludicrous if it weren't so tragic. 🙄

ANONYMOUS

Freedom Fighters or Criminals?

To understand Anonymous you only need three words: Activists, Hackers and Guy Fawkes.

Anonymous is a global network of activists and hackers with members in countries all over the world. Its members are known as “Anons” and all hide their identity by wearing Guy Fawkes masks, similar to those worn in the film “V for Vendetta.”

What do they do?

Anonymous first started out on the image website 4chan. Visitors to the site show up as “Anonymous” hence the name.

4chan users raided and hacked websites including several attacks on social networking site Habbo Hotel. These led to the first media reports on the group.

A common Anonymous tactic is a “denial of service” attack. This crashes a website by sending LOTS of internet traffic its way. Death by spam, basically. Soon the group started pranks and “operations” in the real world. Anonymous first wore Guy Fawkes masks to protect

their identity whilst protesting against the Church of Scientology. The church had tried to remove a video about Scientology by serving a legal copyright notice. Anonymous saw this as trying to censor the internet.

The motto commonly associated with Anonymous is: “We are Anonymous. We are Legion. We do not forgive. We do not Forget. Expect us.”

A PERFECT PLACE TO DIE AOKIGAHARA FOREST

Aokigahara Forest

The Aokigahara Forest is not a long-defunct ancient burial ground, but can be considered a tangled memorial of lost souls because it seems that newly discovered bodies are found swing from its twisted boughs daily, while others lie rotting on its volcanic earth. However though, it's not only the living that visit this national forest's wandering the trails, but there seems to still be quite a number of countless souls that occupy the forest; for it is said that 'Yurei,' Japanese spirits of the dead still cling to their earthly realm, between the white twisted trees, as shifting forms that are occasionally glimpsed by many an unsuspecting visitor.

A Tangled Forest with Dense Boughs

Known for the eerie and discomfiting aura of the forest, its thick twisted branches of trees intertwined as a twisting network of woody vines, and the ankle-breaking unevenness of the forest floor, both conspire to give the place an unwelcoming and disquieting topography. A popular local legend maintains that there is no known wildlife in the forest that makes Aokigahara their home. Ever the more evident when hikers hear

no happy birdsong breaking the eerie silence, whose quiet is sometimes replaced by a darting shadow, or the occasional whistle of wind speeding through the dense forest canopy. Coloured tape litters the walkways, which had been used by hikers marking their way through the dense trees. The deeper one ventures,

I am called here by the guardian spirit of the mountain, on which I shall destroy myself today. For I tire of loving those that cannot love themselves, and I am sick of fighting those who will not surrender their attack.

When I looked to the blue majestic peak of Fuji it beckoned me, this sacred place where elegant cedars meet the sky. I can now look toward the east and I am lonely for all that I cannot have.

I've said good-bye with a kiss to the girl that urgently prayed for my redemption and I've cursed those that sought my destruction. Yet this is not surrender to them, for the choice is mine, and mine alone. I want nothing more from mankind that only seeks power to corrupt others, and is destined only to destroy innocent human lives with their greed and for their pleasure. For this I will no longer be a victim to their evil plotting.

I alone determine my destiny and thus I choose to place my feet into the nether world. A world where nothingness is vast and deluged with the other countless humans that have gone here before me, the dead that can no longer smell the sweetness of baking bread, for they no longer breathe.

I shall soon leave this world, and I will ride a white horse toward the morning sunrise in the shadow of this shallow mountain. No longer bearing witness to the battle for the struggle of life, for I have chosen my own destiny, and for this I am content... because today I am on the mountain.

An unidentified suicide note found in the Aokigahara Forest.

the more accoutrements and makeshift equipment you will find that was used to facilitate the suicide of intent suicidal individuals and the bouquets, candles, and mementos left behind by grieving mourners dot the forest floor.

Although the influence of Ubasute (the act of leaving a dependant to die) has been outdated (not to mention now illegal) it still echoes throughout the countries history and remains within Japan's cultural consciousness. This alone doesn't explain the modern resurgence or the new-found popularity for suicide in the Aokigahara Forest among the despondent. However it is often blamed on two books. The 1960 novel, 'Kuroi Jukai', by Seicho Matsumoto, which romanticizes suicide and culminates with the two lovers going to into Aokigahara; and Wataru Tsurumui's controversial 1993 best-seller, 'The

Complete Suicide Manual', a book that not only describes various methods of committing suicide and even goes on to recommend Aokigahara as "the perfect place to die," it's actually been found many times next to a body.

While literature may have had an impact on romanticizing the forest as a perfect location for suicide, the problem of suicide has been reaching endemic proportions in Japan over the last ten years. A CNN report states, "There were 2,645 suicides recorded in January 2009, a 15% increase from the 2,305 for January 2008, according to the Japanese government. The Japanese government said suicide rates are a priority and pledged to cut the number of suicides by more than 20 percent by 2016. It plans to improve suicide awareness in schools and workplaces. But officials fear the toll will rise with unemployment and bankruptcies, matching suicide spikes in earlier tough economic times."

Although local government declines to publish the exact number of suicides committed in the forest each year in an attempt to circumvent the notion that Aokigahara is a hub for those intent on ending their lives, the location's 'sea of trees' still remains Japan's most popular setting for the world-weary soul to take their lives onto the next. This world location is second only to the San Francisco's Golden

Gate Bridge. But has earned a position on the Dimension Zone's list of Most Haunted locations.

Aokigahara forest becomes the method of choice for those seeking to usher themselves into the 'nether' life, and oddly enough by hanging. Surrounded by a lofty waterfall within the white cedars, pines and boxwoods that provide the more adventurous soul a means to dive right into the hereafter with finesse. But if your intention is not to commit suicide, one can still lose their way quite easily and come to a sticky end unintentionally.

Zack Davisson, a researcher for "Seek Japan," states what may also be another urban myth: "Even in these haunted woods, regular humans still have a job to do.

Forestry workers rotate in and out of shifts at a station building in Aokigahara, and occasionally they will come upon unfortunate bodies in various states of decomposition, usually hanging from trees or partially eaten by animals. The bodies are brought down to the station, where a spare room is kept especially for such occasions. In this room are two beds: one for the corpse and one for someone to sleep next to it. Yup, you read that correctly. It is thought that if the corpse is left alone, the lonely and unsettled 'Yurei' will scream the whole night through, and the body will move itself into the regular sleeping quarters." Asuza Hayano, a Japanese writer,

About the Authorities and the Suicides

criticises those who kill themselves in the area: "Walking through Aokigahara uncharted is dangerous," he says. "But nature is supposed to be like that. Harsh. Aokigahara is filled with untouched natural beauty. To sully it by committing suicide is a slap in the face of the natural environment." "We want people to forget Aokigahara for a little while," a local police officer says. "Every time it's mentioned, it starts off a chain reaction and we end up with more suicides," a tourist industry employee says before producing a booklet that details why potential suicides taken into protective custody before they successfully killed themselves headed for Aokigahara. "Look. Nearly every case says they learned about the area from TV, newspapers or books. By ending the searches, we're throwing back the problem into society's face." A man working in a souvenir store voices the frustrations felt by many locals. "It bugs the hell out of me that the area's famous for being a suicide spot," he says.

"There's nothing worse than seeing kids who come here go home with that impression." "I've seen plenty of bodies that have been really badly decomposed, or been picked at by wild animals," a local police officer says. "There's nothing beautiful about dying in there." "We have to pay for the bodies to be disposed," says Takatoshi Kobayashi, mayor of Narusawa, one of three villages bearing the brunt of cleaning up the

suicides. "Doing so keeps us away from the work we should be doing. (Suicides) ruin the area's name. We're all for an end to the searches." Aokigahara, also known as the Sea of Trees, is a forest that lies at the base of Mount Fuji in Japan. Throughout the forest, rocky caverns can be found everywhere, many of which can still be covered by ice during summer. An old forest, it is purportedly haunted by souls and other legends of monsters and ghosts, all adding to its sinister reputation and ambiance of the forest.

Dubbed as the "perfect place to die," in Wataru Tsurumui's best-selling book *The Complete Manual of Suicide*, even pointing out in the manual that the dense, dark forest bordering of Aokigahara Forest at the base of Mt. Fuji, is the best place to die. Making it the most popular location for those taking their final journey.

Every year local volunteers and police search for bodies throughout the forest. This annual event has occurred since 1970, and the numbers became startling. Each area of the search is marked out by plastic tape that often gets left behind and therefore adds to the litter in the Aokigahara Forest. It has been suggested that hikers help clean up the mess as they hike into the more inaccessible areas, sometimes even marking their way out with similar tape. In 2002, 78 bodies were found within it, replacing the previous record of 73 in 1998. By May of 2006, at least 16 new suicides had been found, and as mentioned earlier, many carrying a copy of Tsurumui's book. No one knows for sure how many bodies go undiscovered.

Signs emblazoned with such messages as "Please reconsider what you're about to do" and "Please consult the police before you go off to die!" are

nailed to trees throughout the forest. However, the woods have such a notoriety and reputation that these minor deterrents do very little to stop the determined. Local residents believe they can always spot a person who is going into the forest for its stunning natural beauty, those who are hunting after a paranormal experience or the macabre, and those who are not planning on returning.

Legends abound; for instance, it is thought that the massive underground iron deposits is what causes compasses to go haywire, including GPS devices, and is responsible for trapping innocent souls passing through with those that came to commit suicide. (Which by the way the magnetic field was recently tested by NASA scientists and found this claim to be unfounded, as their sensitive electronic devices worked flawlessly). Add to that the cenotes (in this case collapsed lava tubes), the hidden caves and the chance of running into an occasional corpse swinging from a creaking bough are ever so present. The fact remains. Aokigahara Forest is considered the Most Haunted location in all of Japan, a purgatory for 'yurei,' for unsettled ghosts in Japan. Spiritualists also believe that the trees themselves are filled with a malevolent forces of energy that has accumulated throughout the centuries from all the suicides, no do they encourage you to visit. 🗿

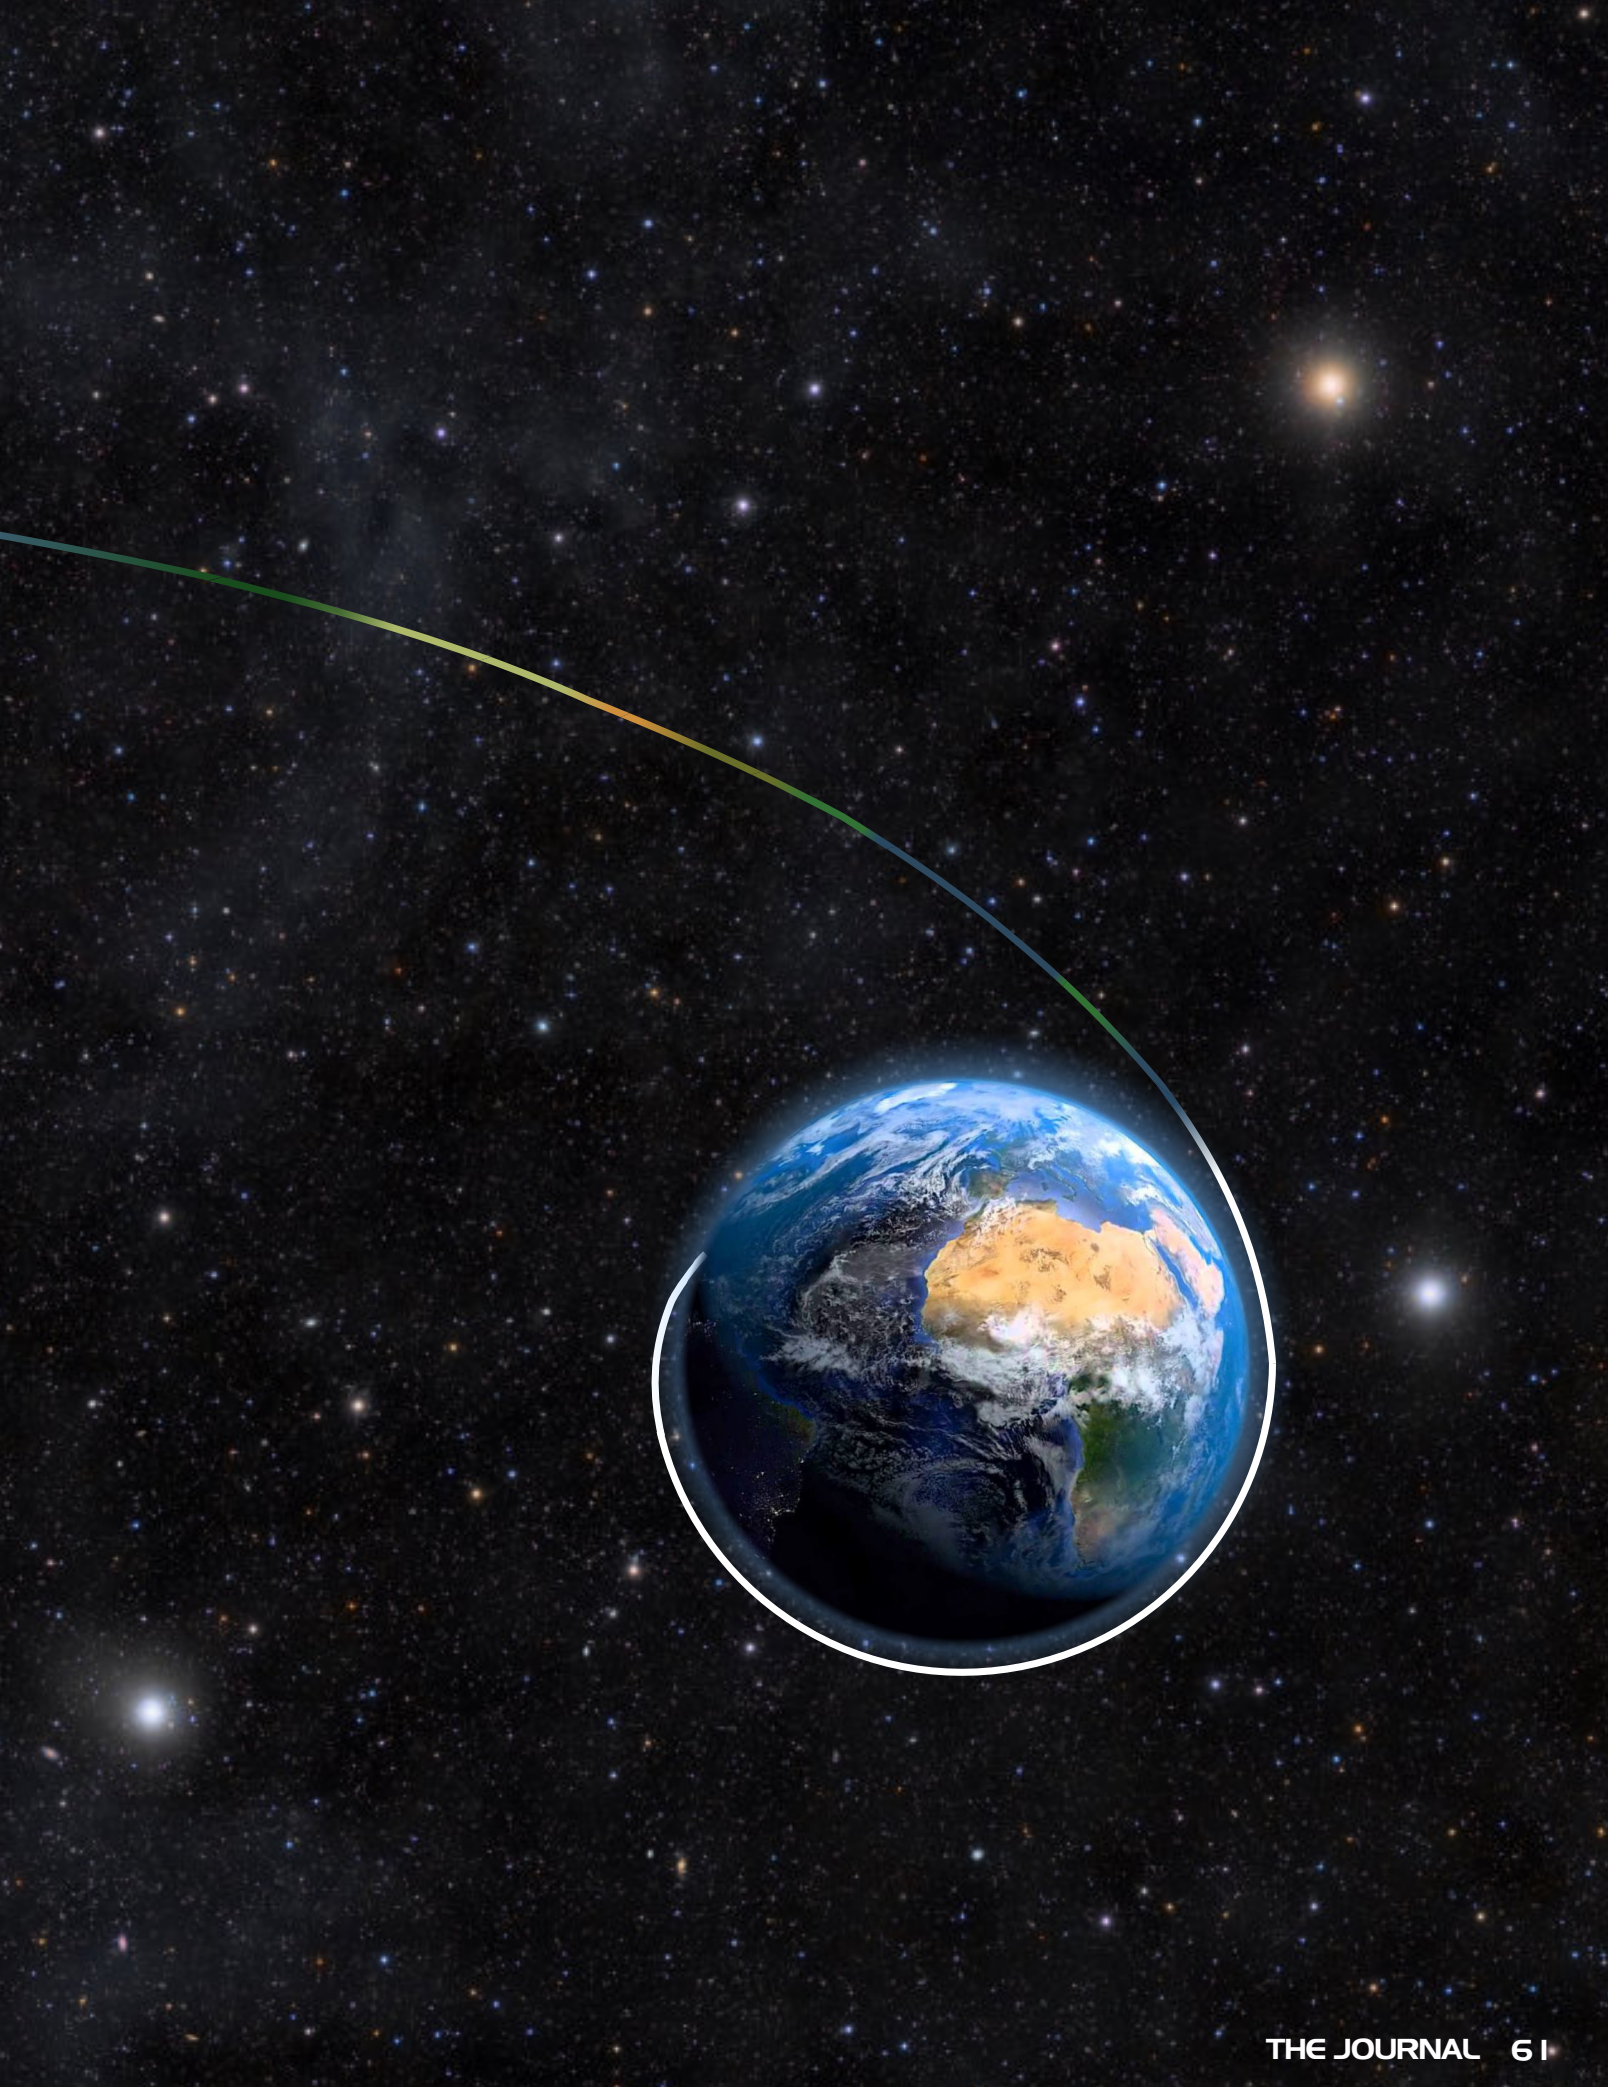

THROUGH VAN ALLEN

A REPORT BY JARI MIKKOLA

The Apollo missions have been controversial since the program of sending astronauts to the moon began. The argument that the entire Apollo program was a hoax is utter nonsense!

According to Bill Kaysing, author of the 1974 book, "We Never went to the Moon," whose exact words about the program are "Any human being traveling through the van Allen belt would have been rendered either extremely ill or actually killed by the radiation within a short time thereof."

The Van Allen Belts are two distinct regions (and a third was recently discovered) several thousand kilometers above the Earth's atmosphere where the Earth's magnetic field holds trapped particles of our sun's solar wind. Without protection, any of earth's lifeforms would indeed receive lethal doses of radiation should they stay there long enough to do so.

What Kaysing was stating was in fact totally false, because in all actually, the Apollo spacecraft's not only traveled through the three belts they did so pretty damn fast; traversing them in a little over an hour, give or take a few minutes.

They simply weren't there long enough time to come even close to what is considered 'a lethal dose of radiation.' In fact, the metal hull of the Apollo spacecraft were able to block out most of the radiation.

There were after all, far worse threats facing the Apollo missions than radiation; such as solar flares and micrometeorites (as experienced by the Apollo 13 crew).

So What Are the Van Allen Belts Exactly?

James van Allen was a pioneer working for NASA in the field of astrophysics, and on 31 January 1958, his studies led to the launch of the Explorer 1 satellite

carrying a payload of scientific instruments. This included a Geiger-Müller tube (used for the detection of ionizing radiation), which later provided valuable data and information of several regions of intense radiation that surrounded the Earth thousands of miles above our atmosphere. His discovery grew to a project that involved over a thousand investigators around the world.

What Van Allen had discovered was a dense environmental belt of radiation that surrounded the Earth which was caused by energetically charged particles held in place by our planet's magnetic field, and to his surprise, it was not one belt, but two. (However, recent studies today have also revealed a third belt further out, that is seems to be temporary, dependent on the sun that appears from time-to-time as an outermost ring which is dependent on the intensity of solar flare activity.

Therefore, when the lunar missions were a go, NASA had not just hoped for the best, they had actually figured out a way to get past these intense regions ionized radiation, and determined the risk was minimal; thus making the journey to the moon and back, entirely possible; and for the record, not a single astronaut received anything close to a enough radiation to make them seriously ill, much less kill them, because their trip took them through the Van Allen belts; not once but twice!

Journey to the UK epicenter of the Crop Circle phenomena with award-winning filmmaker Patty Greer. After visiting dozens of UK Crop Circles she had a “Contact” experience in a 2007 formation that altered the course of her life forever! She ‘Listened’ (the secret of telepathic communications) and 8 movies were co-produced in record time with no training or previous experience.

“Crop Circle Diaries” offers an accumulation of Greer’s most astounding experiences in more than 100 UK Crop Circles.

**June 4th, 2016 from 7-9 PM
The World Premier of Our New “Crop Circle Diaries” Movie will be at “Contact in The Desert 2016” in the Amphitheater!**

**June 30th to July 5th, 2016
at the James Gilliland’s Eceti Summer Conference
Washington**

Patty’s movies and interviews serve as a backstage pass to unraveling these multidimensional communications that were known as “Faerie Rings” long ago. Left like sticky notes and love letters in farm fields around the world, Crop Circles have been documented since the 1700s, yet very few people have noticed! The Circlemakers have used great clarity on many levels to reach us in a language we all understand: Art and Math. The messages are delivered on a conscious and subconscious basis, intended to evolve the collective consciousness of humanity. Left in open fields for all to see who are flying over, on the ground, within the earth, and in the water.

How can we NOT be noticing???

WHATEVER YOU DRIVE
DRIVE A FIRESTONE

Explorer 1 (1958 Alpha 1) was the first Earth satellite of the United States.

magnetic field surrounding our planet, also prevents them from dissipating into space? the same magnetic field that protects us from deadly radiation of the Sun. Thus, the two belts are very much like two large cages circling the planet, at varying altitudes.

Both belts varying slightly, with the inner cage sitting between 965 and 6,000 kilometers above our planet, composed mainly of highly energetic protons. While the outer cage however, between 15,000 and 20,000 kilometers above the planet contains both protons and electrons, with radiation environments of both varying from very dense in some places and nearly barren in others.

Van Allen Belts and Apollo

NASA became immediately apparent of the potential problems after James Van Allen discovered the existence of the Van Allen belts, and that they posed a problem for mankind traveling through them exploring space. The obvious we would have to limit space exploration to altitudes safely below the inner belt that begins at about 965 kilometers. Then when President Kennedy announced a race to the moon 370,000 kilometers away, the challenge was on to not only get there, but also get us through both Van Allen belts.

In the summer of 1960, Robert O. Piland and Stanley C. White of NASA's Space Task Group presented research on the problem. Since it was not practical to shield the astronauts with heavy shielding to guard against the highly radioactive environment of the inner Van Allen belt (as it would have hindered movement although heavy on earth and weightless in space), they had no alternative but to design a lighter, less obtrusive suit with moderate protection.

A half-year later in January of 1961, NASA was on the path towards the

Moon with Apollo though still

The success of Apollo missions was largely due to the International Geophysical Year (IGY) project in which a satellite was launched known as Explorer 1 (the first American satellite to orbit the Earth) on 31 January 1958, for which Van Allen won a spot for his experiments

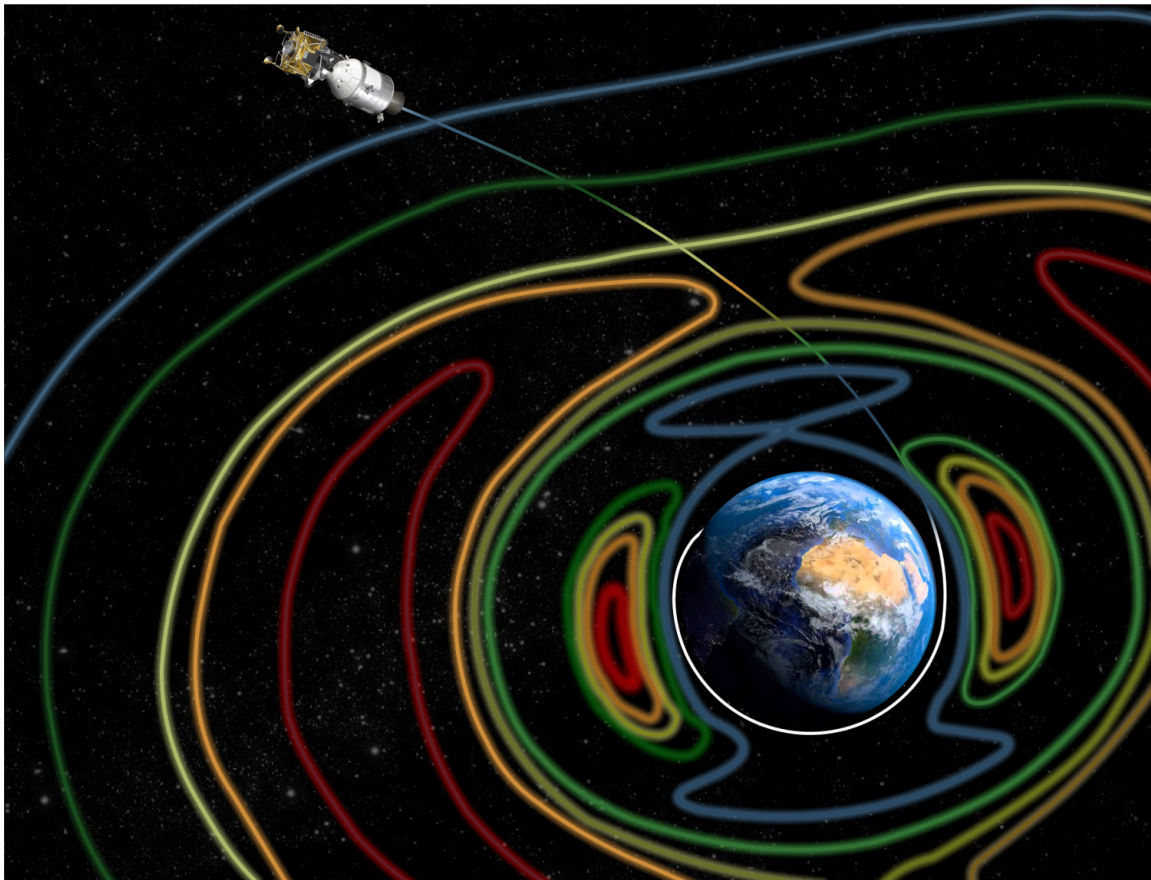

What surprised Van Allen was the cosmic ray equipment on board Explorer 1 had registered nearly no radiation in the region Van Allen had believed to have a high concentration of radiation.

Unconvinced of the accuracy of the data, Van Allen offered the only explanation possible for the low radiation reading; it was a false because trapped particles had polluted the instrument from the Earth's magnetic field and verified by the Explorer 3 satellite in March of 1958. It was then the discovery of the Van Allen belts became one of the outstanding scientific discoveries of the entire IGY project.

The high radiation of charged particles trapped within the Earth's

William Hayward Pickering, James Van Allen, and Wernher von Braun display a full-scale model of Explorer 1 at a crowded news conference in Washington, DC after confirmation the satellite was in orbit.

The best Apollo 11 trajectory to bypass the most intense and dangerous obstacles of the Van Allen belt to avoid the highest radiation exposure to the astronauts.

months away from publicly formalizing their goal and the issue of the Van Allen radiation belt was again on the table once again. NASA's Group on Trajectory Analysis listed the requirement as urgent and requested "a standard trajectory model that could be used to get through the Van Allen radiation belt safely for the entire Apollo program schedule." As they wanted to be prepared for anything and everything that could be an issue before routing a crew through a dangerous heavy radiation environment.

Most of the attempts to illustrate the translunar trajectories of the Apollo moon flight, included elements to hurl the Apollo craft toward the moon with a sling-shot effect across the equator of the Earth, much like the one used to launch the Space Shuttle (under the inner ring of the Van Allen Belt). In fact, little or no effort to deviate from the routine equatorial trajectories of previous satellite launches such as the Ranger 1 satellite launch in 1965, was even considered for Apollo.

However, after determining the orbital elements of Apollo 11's translunar trajectory, a calculation was made that determined the use of a slingshot trajectory from pole-to-pole, limiting the amount of time an astronaut would be exposed to radiation if they could avoid the inner rings of lethal radiation. The US Occupation Safety and Health Agency (OSHA)

stipulates that a lethal dose radiation to be 300 Rad (observed radiation dose) in a single hour. It was assessed that the polar trajectory would avoid the most lethal part of the 'donut' shaped Van Allen Belt that is in line with the Earth's equator, and was adopted by the Apollo team.

By February of 1964, NASA was confident that Apollo crews would be passing through the belts fast enough and through the mildest regions of the Van Allen belt. As the spacecraft's skin, instrumentation, and wall lining of the craft was sufficient protection for not only the expensive craft but its delicate human crew as well. Although in hindsight, it may have seemed foolhardy for NASA to have accepted what they called a 'minimal risk' in sending astronauts through the Van Allen belts without any extra shielding and spacesuit protection, it was an acceptable minor risk in the overall scheme of things.

To allow accurate determination of radiation exposure of the crewman, each carries a personal radiation dosimeter (PRD) and three passive dosimeters. The PRD's provided visual read-outs of the accumulated radiation doses to each crewman experienced, recorded during a particular phase of the mission, as they progressed through the Van Allen belts.

Geiger-Müller Detector & radiation dosimeter sometimes called a radiometer.

By monitoring radiation exposure during all Apollo missions, NASA was able to ascertain the dangers (if any) of the radiation dose astronaut absorbed of ionized radiation during their mission; as well as a Geiger-Müller Detector aboard the mission spacecraft.

The polar trajectory proved successful in avoiding high doses of radiation by the crew of Apollo 11; corroborated by all the dosimeters aboard the spacecraft; NASA had made a good trajectory choice for successfully traversing the Van Allen belt.

By the end of the Apollo 11 missions, the agency determined that their crew had indeed avoided the large doses of radiation many feared would ground all future flights to the Moon. Over the course of the lunar missions, radiation exposure for all 12 astronauts who had gone to the moon and back was less than 12 RADs over a 3-hour period (1 1/2 hours through and back). And according to the US Occupation Safety and Health Agency (OSHA) a lethal radiation dosage is 300 RADs in a single hour. In no case, did any astronaut experience any debilitating medical or biological effects of their mission.

Once the Van Allen Belts were known to exist, they were believed to be "bad news" not only for satellites, but for mankind; a potential threat with potentially destructive and deadly consequences. Yet when the realization was to create a path through the belts, to avoid the most lethal threats, and assess how much

was too much time spent within the inner or outer cage, NASA scientists stepped up and solved the problem.

The trajectory chosen as calculated by NASA for potential radiation dosages with the various regions of the Van Allen belts exposed the astronauts to a total radiation dosage for transit of only 11.40 RAD!

The speed of the spacecraft was approximately 25,000 km/hour. Thus, if the spacecraft traveled along the indicated path in the trajectory image, the length of time in each regions and the estimated dosage of radiation was estimated to be around; BLUE - 27.6 minutes minutes for 00.17 RADs, YELLOW - 06.1 minutes, for 01.83 RADs, ORANGE - 15.3 minutes for 09.18 RADs, GREEN - 03.8 minutes for 00.23 RADs, and RED - 00.0 minutes for no exposure at all in the most lethal section of the Van Allen Belts.

The total dosage for the trip was approximately 12.0 RADs per astronaut in a period no less than 53 minutes and no more than 60 minutes of their journey.

Add to this the fact that the radiation exposure for each astronaut was reduced during the time the spacecraft was transmitting the Van Allen Belt because of the radiation shielding inside the spacecraft. Cutting their overall exposure by approximately 13 RAD's per hour making the over all exposure basically harmless.

Thus to make the long story short, YES, we did get through the Van Allen Belts safely; and YES we did land on the moon... Well, at least Apollo 11 and 12 did. But that's still another story in and of itself. 🤖

Apollo 17's Gene Cernan and Jack Schmitt happily non-irradiated.

Continued from Page 28

A universe where the very laws of nature are different – for example, one in which there are no relativistic limitations and the speed of light can be exceeded – would in general count as a parallel universe but not an alternative reality. The correct quantum mechanical definition of parallel universes is “universes that are separated from each other by a single quantum event.”

Parallel universes are considered parallel because there is no way of reaching them. All other dimensions are not parallel, but more than likely most of them are. An Einstein Rosen bridge, or Wormhole, can take you to a different dimension. Note that the journey through space-time continuum could backwards age you, or wipe you from existence. More than likely, if you managed to get to the alternate dimension, then you would have no memory of how you got there. The dangers of time-space travel are still being investigated, and possibilities are growing.

Typically, parallel universes fall into two classifications. The first may be more accurately called a “diverging universe” whereby two versions of Earth share a common history up to a point of divergence. At this point, the outcome of some even happens differently on the two Earths and the histories continue to become more different as time elapses since that point. The second type is where despite certain, often large, difference between the

two Earths history and/or culture, they maintain strong similarities. In such cases, it is common that every person in one universe will have a counterpart in the other universe with the same name, ancestry, appearance, and frequently occupation but often a very different personality.

We could all be living multiple parallel lives, because as scientists explore the outer reaches of physics and the cosmos, they’re beginning to believe that parallel universes do exist and that they might determine the fate of humanity. The word “Universe” is supposed to mean everything that exists. Today, we’re almost certain that our Universe is not all there is. There really could be parallel Earths, parallel you’s, and parallel me’s. It’s hard not to wonder what our alter egos might be like, whether they are living out our most cherished dreams. But don’t forget this possibility you could already be living the dream of another you from a parallel universe.

Scientists now believe there may really be a parallel universe – in fact, there may be an infinite number of parallel universes, and we just happen to live in one of them. These other universes contain space, time and strange forms of exotic matter. Some of them may even

contain you, in a slightly different form. Astonishingly, scientists believe that these parallel universes exist less than one millimetre away from us. In fact, our gravity is just a weak signal leaking out of another universe into ours. 🗣️

In 1995, New Mexico Congressman Steven Schiff requested an investigation into the Roswell Incident through the General Accounting Office. The report he received back after the GAO had interviewed several people in other agencies in Washington, that all stated that the documents related to Roswell were somehow "missing" or "destroyed" without proper authority; all of which should have been classified as permanent records, and never even considered to be disposed of.

The GAO further stated they could not identify who destroyed the messages, or why. Those messages would have involved the 509th Bomb Group, (the only atomic bomb group in the world in 1947), who ended the war with Japan 2 years earlier. This, of course, raises the question of accountability among our leaders in Washington then and now.

Many times when I submit a Freedom of Information Request Form for military records to the National Personnel Records Center in St Louis, Missouri, I will get a response in a form letter stating those records may have been destroyed in a fire at the center July 12, 1973.

Since the Roswell Incident occurred in 1947, there have been a few congressional hearings on the subject of UFOs, with no substantial information coming forward from those hearings to resolve the question. Meetings have been held at the United Nations, again, with no results. Astronauts, law enforcement officers, airline pilots and such have brought up the subject of UFOs existing, again, with no follow up by any legislators or people in the know.

The Phoenix lights, Stephenville Texas near President Bush's ranch, the O'Hara airport incident and many others have all been reported by credible individuals, but no one follows through on these well documented occurrences. Lame, unsatisfactory excuses are sometimes given by those in authority to pacify the public, and then the incident is filed away, never to be mentioned again, such as was the case with the Condon Report, Blue Book, the Roswell Reports and several other reports made public over the years.

Many of us believe the 4 excuses given for Roswell during the past 60 some years do not satisfactorily explain what happened on the ranch near Roswell. For me that raises an important question, "Who in our government is willing to admit that they have been lying to us for all those years?"

I don't see that happening, and would open the question to many other things our Government and certain military leaders have been covering up, and still do today, if you watch the national news almost on a daily basis. Cover up has become a way of life and doing business by our leaders in Washington and at some local levels, and it appears that "we the people" are accepting that. At my age, the concern I have for our younger generation is that although there is information we probably don't need to know for our nation's security, lying to us about many of these cases is not what our elected officials are elected to do or how they are to represent the people; us! 🗣️

In 2013 the Central Intelligence Agency (CIA) acknowledged its exact location in Nevada, near Groom Lake, in a series of documents released as part of a Freedom of Information request.

The documents describe how the facility had been used during the Second World War as an aerial gunnery for the Army Air Corp pilots.

President Dwight Eisenhower later approved “this strip of wasteland, known by its map designation as Area 51, to the Atomic Energy Commissions Nevada test site and training range. It then became central in the development of the U-2 spy plane.

- [Three Alien Planets Around a Tiny, Cold Star Just Might Support Life](#)

Major Bolden also said that one of the main reasons humans have not yet landed on Mars was down to the lack of adequate toilet facilities.

NASA is hoping to send humans to Mars in the 2030s but said there were technological hurdles that still needed to be overcome.

“The goal is to have us there in the early 30s. They

won't land, they'll probably do an orbital mission like the first time we went to the Moon. We've got to get the Martian surface ready for human habitation.

“We're not going to send humans down to the surface of Mars to build the habitats, the houses, we're probably going to use robots.

“Our technical abilities are not what we want it to be now. We need better life support systems, we need a toilet that's not going to break on the way there, then when we get to the Martian surface we need (a toilet) that's going to work over and over again. Toilets are a big deal.”

- [Listen: 'Alien sounds' recorded 22 miles above the earth](#)
- [Seeking the Truth to Area 51](#)

Major Bolden was also asked if he became frustrated by conspiracy theorists who claimed the Moon landing was faked.

“I understand people have doubts,” he said. “I have no doubts we went to the moon and I have no doubts that we're going to mars in your lifetime.” 🗣️

(Mr Bolden was answering questions for the children's newspaper First News show Hotseat which is broadcast on Sky News.)

What do they believe in?

Anonymous isn't your regular activist group, compared to a flock of birds. "How do you know they're a group? Because they're travelling in the same direction. At any given moment, more birds could join, leave, peel off in another direction entirely."

According to the group there is a loose command structure in place. However, as there is no official leadership it makes it very hard to link actions to the "group". Journalist Quinn Norton writes;

"Its wild string of brilliant hacks and protests seemed impossible in the absence of some kind of defined organization."

It's even harder to work out what their motives are, or what they want.

Anonymous has been associated with liberal or anti-establishment causes. For anti-establishment think: against the established authority and opposing conventional society.

Many Anonymous videos talk about giving the power back to the people. Anonymous has assisted pro-democracy movements in the Middle East and have taken on big corporations like PayPal.

However for many, taking part in raids would seem to be purely for Lulz. Lulz – plural of Lol (laugh out loud), now used to describe funny internet content

Anti hero?

Quinn Norton notes that you're never sure if they are the hero or anti-hero. Parmy Olson wrote a book on Anonymous and mentions that they have done a lot of bad things.

"Unnecessarily harassing people – I would class that as a bad thing. DDOSing [attacking] the CIA website, stealing customer data and posting it online just for shits and giggles is not a good thing."

If Anonymous wants power for the people how does exposing their private details help? Seems like someone went off message.

Having no clear ideology makes it difficult for Anons to decide what they stand for, and what activity is off-limits.

Disagreements within the group are regular. Like when a small group threatened to take down Facebook, only to be disavowed by the majority of Anonymous. Bit embarrassing.

ANONYMOUS Million-Mask March on London. 2015

Warning: Some people carry!

Smith & Wesson®

Are Anonymous Freedom Fighters or Criminals?

Though they may hack websites for the banter, when you take down the US Department of Justice's page you risk the wrath of the security services.

So far dozens from many countries (including the UK and US) have been arrested for taking part in Anonymous hacks. A 19-year-old called Dmitriy Guzner was sent to jail for a year for hacking.

Hector Monsegur, one of the main leaders of the group was identified by the FBI in 2011. Monsegur then spied on Anonymous for the FBI, leading to more arrests.

Anonymous' attacks on child pornography websites on the Dark Web have been praised by some. However others say that taking vigilante action may compromise existing police investigations.

Don't think this is just about crashing websites though. Anonymous actually caused the resignation of Aaron Barr, CEO of company HBGary. Emails they had hacked into revealed some dodgy corporate behaviour.

Anonymous also organises the Million Mask March, an annual event where Anons descend on London. In recent years this has also expanded to other cities. Violence has previously broken out at these marches with protesters fighting against police officers.

It could be argued that being a freedom fighter requires breaking the law in order to overcome the current system. But is violence ever justified?

Anonymous has just as many enemies as supporters. However Anonymous is here to stay, at least for now. After all, how do you shut down a global operation which has no known base?

Anonymous Unmasked; is the most elusive activist group in the world!

Is this new activist group what's needed to take on corruption and bring power back to the people? Or is just a network of bored troublemakers? What's your take on Anonymous?

Do say: "Anonymous is an interesting example of how lack of structure in an organisation makes it hard to shut down" But never say, "I bet they couldn't hack me" 🗨️

Anonymous Message to the Citizens of the World

Advanced Study. Kepler, for instance, believed that the Platonic solids were the fundamental constituents of the universe. Today we know better. In the 17th century, scientists thought that cold was a substance that could flow from one place to another, chilling your doorstep or tip of your nose. Now we understand that heat and cold are just another way of talking about the statistical properties of a collection of molecules. Of course, that doesn't mean that it feels any less real when you burn your tongue on your hot cocoa.

So why are physicists picking on space? Relativity delivered the first strike. "In relativity, space and time are not rigid. They are dynamic," says Seiberg. Building all of physics on such a malleable infrastructure is akin to constructing your house on a foundation of Jello.

More alarmingly to theorists, our ability to measure features in space is intrinsically limited. A ruler can't measure distances smaller than the width of its painted markings; the resolution of a microscope is constrained by the wavelength of the light in which it makes images; even scanning tunneling microscopes are limited by the physical size of their probe tips.

Can't we just build a better microscope? "It's not because we don't have the budget to build a powerful enough machine," explains Seiberg. If we somehow tried to make an infinitely small measuring device, that device would become so dense that it would warp the fabric of space. The conclusion: "Space itself is ambiguous," says Seiberg. Strike two.

Space also took a hit from an unlikely foe: the hologram. We think of holograms as the dazzling,

silvery images on postcards and credit cards: two-dimensional objects that project three-dimensional pictures. More generally, though, a hologram is anything—even an equation—that encodes an extra dimension's worth of information. It turns out that you can write equations that describe our universe perfectly well using different combinations of spatial dimensions, creating mathematical holograms that are indistinguishable from reality. Like a book that can be translated into many disparate languages without losing a syllable of meaning, our universe seems to tell a story that is independent of the words in which we have always chosen to express it.

Finally, physicists have known for some time that their descriptions of space start to break down when they're applied to the strange-but-true environments inside black holes and close to the time of big bang. In such cases, the familiar equations start popping out infinities—nonsense answers that suggest that the equations are missing some essential machinery. "Something else should kick in," says Seiberg.

But what is that something else? "I don't think I have an answer to that," says Seiberg. Knox also leaves the door open to as-yet-unknown possibilities: "Whatever it is that's fundamental, it's not the stuff we have a handle on right now." Moreover, Seiberg adds that though theorists have assembled a strong case that space is emergent, time presents a more difficult problem. "In order to understand emergent time, we need a complete revolution in the way we think about physics."

Letting go of space and time without ready replacements may seem like a sure-fire way to plunge into the abyss of abstraction. But it may be only by loosening our grip that we can come to grasp what is truly fundamental. 🤖

Actually, many producers and writers have openly testified they've been "given" the ideas or script outlines by apparent CIA and otherwise "operatives". This is especially the case when they show these huge scenes of massive military operations or the propaganda is particularly pointed; you then know the "suppliers" of all this equipment and backdrop have a heavy hand on the scale.

It's clearly a pervasive factor in the content of these movies. The scale of social engineering on our planet is extraordinary. Disasters happen, no doubt. But when psychopaths have technology and covert operations to literally cause them, then it becomes a different ball game.

Especially when you factor in their manipulation of the "fear factor". Religious pounding with messages and prophecies regarding the "End Times" are perhaps the biggest influence in people's minds, something to be very mindful of as it's deeply ingrained in the human psyche.

Apocalypse In The News

The social programmers love this subject. While they try to keep their credibility with the more wary audience with comments about "crackpots, kooks and conspiracy nuts" who actually believe this stuff, these Illuminist media controllers push the End of the World scenario big time.

We've seen the alien invasion how many times? Even the White House gets blasted on several occasions. We've had the asteroid impact over and over. Plagues killing us off are big, as are huge earthquake and mega tsunami scenarios. Even a frozen future world with 'Day After Tomorrow' type movies. And it gets more bizarre all the time.

It's imprinting, or entraining the human psyche. This is also commonly known as simple programming. In this case it's predictive programming – to not just accept but expect catastrophes.

Don't you find it ironic they produce this stuff hand over fist and then these same minions and their complicit media and education stooges work hard to belittle anyone who actually believes it or warns of very real engineered or even possible "natural" catastrophes?

Are We Getting "Jerked Around"?

Actually it's a very sophisticated mind control technique, a deliberate mixture of traumatized cognitive dissonance while injecting their deliberate predictive programming for possible future events that may suit their purpose. It's all acclimating their subjects to manipulated tension, fear and the ever present threat and even assumed "knowledge" of eventual apocalypse. Nasty psychopathic bastards, in a nutshell. But it's effective.

Why, you ask? For the above reasons, but when you jump to eventual conclusions you can't help but wonder if there are deliberate forces out to decimate our planet. Then when you extrapolate the implications of such a possibility you again can't help but wander into wondering if this is some sort of terraforming being carried out by some parasitic other dimensional force, while extracting as much energy out of us possible in the process?

The simple greed explanation makes no sense in the light of the suicidal rape and destruction of our planet we're witnessing. There is a bigger picture we need to be aware of. Fortunately with that comes the empowerment to use the right tools to combat such an apparently inter-dimensional parasitic force.

But I digress...or did I?

The Looming "Kill Shot" Solar Flare and Grid Failure Drills

I'm all on board with speaking up about potential natural and man-made disasters. The USGS isn't even reporting earthquakes accurately any more and the weather news is completely controlled by the black op arm of the defense department and their complicit corporations such as Raytheon. The EPA doesn't test for chemtrail chemicals and even shut down their radiation sensors.

The whole system has been co-opted and we need to fend for ourselves, and many independent reporting sources are doing a great job of this.

This solar cycle news has been open knowledge for years now, warning us of some very real potential serious problems. Oddly it's been a disappointment as far as intensity goes and moved into a minimum stage, but this magnetic shut-down is worth learning about. Another major factor to be familiar with is planetary alignments and the lunar phases.

We're still hearing about potential massive solar flares hitting that could cripple whole continents. And this is real. Even insider Michio Kaku has "predictively" often been in the mainstream news talking about it, only to have the story shuffled into the subconscious once again. Other major factors besides the sun are planetary alignments and the lunar phases, an area of research well worth tracking.

We've seen massive grid failure drills, including impromptu power outages like the great "Shake Out" supposed earthquake preparedness drill in the US heartland surrounding the New Madrid fault that has now become an annual event.

As if they care, but again, it creates acceptance in the public mind of not just an event but the state and military control over every phase of society. It's conditioning. All based on fear and more unquestioned dominance. And the programmed human outcry? "Save us. We need more protection, more technology, more security! Please give us more control over these these uncontrollables! And by all means feed us! (since we didn't prepare ourselves...)"

A MASSIVE EXAMPLE OF PROGRAMMING

This movie keeps coming back to me and I understand why. With incoming comets, reports of hundreds of fireballs, increased tectonic and volcanic activity, and our central star recently undergoing a magnetic flip and shut-down influencing our deliberately destabilized planet in profound ways, it's no wonder.

The movie "Knowing" is slow as far as movies go, and Nicolas Cage is pretty much the same guy you see in all his movies. The plot is actually relatively simple, and is drawn out using interim catastrophes leading up to the big revelation at the end as his child gets swept into the phenomenon of hearing the "whisperers" who've given coded warning messages to a couple of generations of 'experiencers' of what's about to transpire.

Nick goes a bit berserk as he figures out the code and traces the predicted disasters, but his passionate search culminates when he decodes the last line of the predictive numbers as "ee"...the "End of Everything" an "Extinction Event." 🗣️
